Handbook of Solid State Chemistry, 6 Volume Set Richard Dronskowski, Shinichi Kikkawa, Andreas Stein, 2017-10-23

This most comprehensive and unrivaled compendium in the field provides an up to date account of the chemistry of solids, nanoparticles and hybrid materials. Following a valuable introductory chapter reviewing important synthesis techniques, the handbook presents a series of contributions by about 150 international leading experts. The Who's Who of solid state science. Clearly structured in six volumes, it collates the knowledge available on solid state chemistry starting from the synthesis and modern methods of structure determination. Understanding and measuring the physical properties of bulk solids and the theoretical basis of modern computational treatments of solids are given ample space as are such modern trends as nanoparticles, surface properties and heterogeneous catalysis. Emphasis is placed throughout not only on the design and structure of solids but also on practical applications of these novel materials in real chemical situations. **Luminescence**

of Inorganic Solids B. Bartolo, 2012-12-06 These proceedings report the lectures and seminars of a course entitled Luminescence of Inorganic Solids held at Erice, Italy, June 15-30, 1977. This course was an activity of the International School of Atomic and Molecular Spectroscopy of the Ettore Majorana Centre for Scientific Culture. The course opened with an overview of the present status of luminescence research and with an assessment of its future trends. The following lectures introduced the basic formalism behind the interaction of matter with the radiation field and the lattice phonons. The luminescence properties of various classes of inorganic materials were treated next for the specific cases of unfilled shell activators, transition metal, lanthanide and actinide ions and filled s¹¹ activators, s² and d¹⁰ ions. Different models suitable for the description of the luminescence properties of semiconductors were examined next. The dynamics of energy transfer and relaxation in the excited state of the activators were treated in lectures devoted to the luminescence phenomena of

sensitization concentration quenching and thermal quenching Finally the relevance of luminescence studies to the field of phosphor technology and to the laser field Has examined Each lecturer began the treatment of this topic s at a fundamental level and finally reached the current level of research The sequence of the lectures was determined by the requirements of a didactical presentation The emphasis of the course was primarily on basic principles The formal lectures Here complemented by seminars and discussions
