Solitary Waves In Plasmas And In The Atmosphere:

Solitary Waves in Plasmas and in the Atmosphere Vladimir .I. Petviashvili, Oleg .A. Pokhotelov, 2016-04-15 First Published in 1992 This book arose as a result of the authors work on the review Solitary Vortices in Plasmas written for the Soviet Journal of Plasma Physics With the development of nonlinear wave theory some novel concepts came into use such as solitary waves solitary vortices and solitons There is still some inconsistency in the use of these terms The study of solitary waves solitons should ultimately lead to a better understanding of the internal structure of elementary particles That is why solitons are attracting great attention from physicists and mathematicians The material presented in this book shows that solitons are also of interest in plasma physics and geophysics where these concepts have many important applications

Chaos and Structures in Nonlinear Plasmas Claude Wendell Horton, Yoshi H. Ichikawa, 1996 This book develops the subject of nonlinear plasma physics from a general physics perspective It begins with a description of nonlinear oscillations the parametric instability the pendulum and the nonlinear island overlap criterion The Kolomogorov Arnold Moser KAM theory is analyzed Laboratory visualizations of the KAM theory are presented for experiments in toroidal plasma confinement and rotating fluids The subjects of transport in $E \times B$ flows and geostrophic flows are developed in parallel stressing the generality of the Charney Hasegawa Mima equation The dual nature of wave turbulence and vortex dynamics is developed for plasmas and geophysical flows The presentation of the subject of nonlinear maps shows how maps are related to the nonlinear dynamics in plasma physics problems Numerous space plasma and fusion physics examples are developed throughout the book The final chapter deals with turbulence theory renormalized mode coupling equations and Kolomogorov type spectra as modified for anisotropic plasmas

Multi-scale Dynamical Processes in Space and Astrophysical Plasmas Manfred P. Leubner, Zoltán Vörös, 2012-08-01 Magnetized plasmas in the universe exhibit complex dynamical behavior over a huge range of scales The fundamental mechanisms of energy transport redistribution and conversion occur at multiple scales The driving mechanisms often include energy accumulation free energy excited relaxation processes dissipation and self organization The plasma processes associated with energy conversion transport and self organization such as magnetic reconnection instabilities linear and nonlinear waves wave particle interactions dynamo processes turbulence heating diffusion and convection represent fundamental physical effects They demonstrate similar dynamical behavior in near Earth space on the Sun in the heliosphere and in astrophysical environments Multi scale Dynamical Processes in Space and Astrophysical Plasmas presents the proceedings of the International Astrophysics Forum Alpbach 2011 The contributions discuss the latest advances in the exploration of dynamical behavior in space plasmas environments including comprehensive approaches to theoretical experimental and numerical aspects The book will appeal to researchers and students in the fields of physics space and astrophysics solar physics geophysics and planetary science

Plasma Interaction in Space P. K. Shukla, 2002 Dust is ubiquitous in the universe and responsible for stellar and planetary formation Virtually all previous studies have considered the dust particulates to be a charge neutral component Satellite missions such as Voyager revealed the extent to which charged dust plays a role in astrophysics In most areas dust exists in the presence of a dilute plasma In such a plasma environment the dust becomes charged to a variety of processes eg photo ionisation collisions with electrons and ions thermionic emission etc Closer to home in the Earth's mesosphere rocket measurements and radar observations conclusively demonstrate the importance of charged dust in forming complex structures responsible for Polar Mesospheric Summer Echoes This book is the outcome of a periodic collaboration between a small group of scientists meeting twice a year at the International Space Science Institute ISSI in Bern Switzerland over a period of three years The book begins with a description of the fundamental physical processes which characterise dusty plasmas Starting with charging and shielding of isolated dust particles in a plasma environment the review progresses to non linear dust dynamics of spherical and irregular dust In an ensemble of a dust plasma system collective processes begin to manifest themselves in the form of new wave modes and instabilities which play an important role in the collective behaviour displayed in space and astrophysical environment Finally more exotic topics such as the Ising model for irregular dust grain alignment classical Casimir forces and chargeons are explored **Solitary Waves in Fluid Media** Claire David, Zhaosheng

Feng, 2010 Since the first description by John Scott Russel in 1834 the solitary wave phenomenon has attracted considerable interests from scientists The most interesting discovery since then has been the ability to integrate most of the nonlinear wave equations which govern solitary waves from the Korteweg de Vries equation to the nonlinear Schrodinger equation in the 1960's From that moment a huge amount of theoretical works can be found on solitary waves Due to the fact that many

physical phenomena can be described by a soliton model applications have followed each other in telecommunications

Cramer, 2011-02-10

Low frequency wave modes of magnetized inhomogeneous plasmas have been subject to intense study in the last decade because they play important roles in the transport of energy in the plasmas The Alfvén wave heating scheme has been investigated as a supplementary heating scheme for fusion plasma devices and it has been invoked as a model of the heating of the solar and stellar coronae This book covers the latest research into the properties and applications of low frequency wave modes in magnetized plasmas the Alfvén waves and magneto acoustic waves in the context of laboratory space and astrophysical plasmas In particular non ideal effects on the dispersion relation and absorption properties of linear and non linear waves are included such as ion cyclotron effects friction between the ionized plasma and a background gas of neutral atoms and the interaction of the plasma with dust particles The book also surveys the theory of Alfvén and magnetoacoustic waves in inhomogeneous plasmas as occur in realistic laboratory space and astrophysical plasmas with resulting localized wave modes such as surface waves Waves are considered under a variety of plasma conditions ranging from cold cosmic plasmas to hot laboratory and solar plasmas to the relativistic plasmas around pulsars **Physics of Space: Growth Points and Problems** Nicole Meyer-Vernet, Michel Moncuquet, Filippo Pantellini, 2011-06-28

Proceedings of the Second Rencontres de l'observatoire Observatoire de Paris Meudon France *Turbulent Transport in Magnetized Plasmas* Claude Wendell Horton, 2012

The book explains how magnetized plasmas self organize in states of electromagnetic turbulence that transports particles and energy out of the core plasma faster than anticipated by the fusion scientists designing magnetic confinement systems in the 20th century It

describes theory experiments and simulations in a unified and up to date presentation of the issues of achieving nuclear fusion power
