Space And Time In Special Relativity:

Space and Time in Special Relativity N. David Mermin, 1968 **Einstein's Space-Time** Rafael Ferraro, 2007-06-07

This excellent textbook offers a unique take on relativity theory setting it in its historical context Ideal for those interested in relativity and the history of physics the book contains a complete account of special relativity that begins with the historical analysis of the reasons that led to a change in our view of space and time Its aim is to foster a deep understanding of relativistic spacetime and its consequences for Dynamics Cosmological Special Relativity: Structure Of Space, Time And Velocity

Moshe Carmeli, 1997-09-15 This book deals with special relativity theory and its application to cosmology It presents Einstein's theory of space and time in detail and describes the large scale structure of space time and velocity as a new cosmological special relativity A cosmological Lorentz like transformation which relates events at different cosmic times is derived and applied A new law of addition of cosmic times is obtained and the inflation of the space at the early universe is derived both from the cosmological transformation The book will be of interest to cosmologists astrophysicists theoretical physicists mathematical physicists and mathematicians *Curvature of Space and Time, with an Introduction to Geometric Analysis*

Iva Stavrov, 2020-11-12 This book introduces advanced undergraduates to Riemannian geometry and mathematical general relativity The overall strategy of the book is to explain the concept of curvature via the Jacobi equation which through discussion of tidal forces further helps motivate the Einstein field equations After addressing concepts in geometry such as metrics covariant differentiation tensor calculus and curvature the book explains the mathematical framework for both special and general relativity Relativistic concepts discussed include initial value formulation of the Einstein equations stress energy tensor Schwarzschild space time ADM mass and geodesic incompleteness The concluding chapters of the book introduce the reader to geometric analysis original results of the author and her undergraduate student collaborators illustrate how methods of analysis and differential equations are used in addressing questions from geometry and relativity The book is mostly self contained and the reader is only expected to have a solid foundation in multivariable and vector calculus and linear algebra The material in this book was first developed for the 2013 summer program in geometric analysis at the Park City Math Institute and was recently modified and expanded to reflect the author's experience of teaching mathematical general relativity to advanced undergraduates at Lewis Clark College Einstein's Space-Time

special relativity A cosmological Lorentz like transformation which relates events at different cosmic times is derived and applied A new law of addition of cosmic times is obtained and the inflation of the space at the early universe is derived both from the cosmological transformation The relationship between cosmic velocity acceleration and distances is given In the appendices gravitation is added in the form of a cosmological general relativity theory and a five dimensional unified theory of space time and velocity This book is of interest to cosmologists astrophysicists theoretical physicists mathematical physicists and mathematicians

Physical Relativity Harvey R. Brown, 2005-11-24 Physical Relativity explores the nature of the distinction at the heart of Einstein's 1905 formulation of his special theory of relativity that between kinematics and dynamics Einstein himself became increasingly uncomfortable with this distinction and with the limitations of what he called the principle theory approach inspired by the logic of thermodynamics A handful of physicists and philosophers have over the last century likewise expressed doubts about Einstein's treatment of the relativistic behaviour of rigid bodies and clocks in motion in the kinematical part of his great paper and suggested that the dynamical understanding of length contraction and time dilation intimated by the immediate precursors of Einstein is more fundamental Harvey Brown both examines and extends these arguments which support a more constructive approach to relativistic effects in Einstein's terminology after giving a careful analysis of key features of the pre history of relativity theory He argues furthermore that the geometrization of the theory by Minkowski in 1908 brought illumination but not a causal explanation of relativistic effects Finally Brown tries to show that the dynamical interpretation of special relativity defended in the book is consistent with the role this theory must play as a limiting case of Einstein's 1915 theory of gravity the general theory of relativity Appearing in the centennial year of Einstein's celebrated paper on special relativity Physical Relativity is an unusual critical examination of the way Einstein formulated his theory It also examines in detail certain specific historical and conceptual issues that have long given rise to debate in both special and general relativity theory such as the conventionality of simultaneity the principle of general covariance and the consistency or otherwise of the special theory with quantum mechanics Harvey Brown's new interpretation of relativity theory will interest anyone working on these central topics in modern physics

Flat and Curved Space-times George Francis Rayner Ellis, Ruth M. Williams, 2000 The present book explains special relativity and the basics of general relativity from a geometric viewpoint Space time geometry is emphasised throughout and provides the basis of understanding of the special relativity effects of time dilation length contraction and the relativity of simultaneity Bondi's K calculus is introduced as a simple means of calculating the magnitudes of these effects and leads to a derivation of the Lorentz transformation as a way of unifying these results The invariant interval of flat space time is generalised to that of curved space times and leads to an understanding of the basic properties of simple cosmological models and of the collapse of a star to form a black hole The appendices enable the advanced student to master the application of four tensors to the relativistic study of energy and momentum and of electromagnetism In addition this new edition contains up to date

information on black holes gravitational collapse and cosmology **Space, Time, and Stuff** Frank Arntzenius, Cian Seán Dorr, 2014 Frank Arntzenius presents a series of radical ideas about the structure of space and time and establishes a new metaphysical position which holds that the fundamental structure of the physical world is purely geometrical structure He argues that we should broaden our conceptual horizons and accept that spaces other than spacetime may exist *Space, Time, and Spacetime* Vesselin Petkov, 2010-09-02 Dedicated to the centennial anniversary of Minkowski's discovery of spacetime this volume contains papers most presented at the Third International Conference on the Nature and Ontology of Spacetime that address some of the deepest questions in physics
