## **Space And Transport In The World System:**

*Space and Transport in the World-System* Stephen G. Bunker, Paul S. Ciccantell, 1998-02-28 Key metaphors in world system analysis are profoundly spatial but there have been few attempts to understand how space location and topography affect world system organization and process To fill this gap this book examines case studies of the restructuring of space and transport in core semiperipheral and peripheral economies It addresses such topics as the role of ocean transport in linking terrestrially based units of the capitalist world economy the role of land transport systems in the construction and restructuring of relationships between raw materials peripheries and core economies and the role of the airplane in transforming and representing changing spatial economic and social relations in the capitalist world economy World systems theory and many other perspectives on the world economy including international political economy and analysis of globalization typically pay only limited attention to issues of space location and the role of transportation in the world economy This book identifies key theoretical and empirical issues and provides the basis for formulating research strategies to address this gap in our understanding

**A World-Systems Reader** Thomas D. Hall, 2000-03-01 This book brings together some of the most influential new research from the world systems perspective The authors survey and analyze new and emerging topics from a wide range of disciplinary perspectives from political science to archaeology Each analytical essay is written in accessible language so that the volume serves as a lucid introduction both to the tradition of world systems thought and the new debates that are sparking further research today

**Migration, Racism and Labor Exploitation in the World-System** Denis O'Hearn, Paul Ciccantell, 2021-07-29 This book offers a historically sweeping yet detailed view of world systemic migration as a racialized process Since the early expansion of the world system the movement of people has been its central process Not only have managers of capital moved to direct profitable expansion they have also forced cajoled or encouraged workers to move in order to extract grow refine manufacture and transport materials and commodities The book offers historical cases that show that migration introduces and deepens racial dominance in all zones of the world system This often forces indigenous and imported slaves or bonded labor to extract process and move raw materials Yet it also often creates a contradiction between capital's need to direct labor to where it enables profitability and the desires of large sections of dominant populations to keep subordinate people of color marginalized and separate Case studies reveal how core states are concurrently users and blockers of migrant labor Key examples are Mexican migrants in the United States both historically and in contemporary society The United States even promotes of an image of a society that welcomes the immigrant while policy realities often quite different Nonetheless the volume ends with a vision of a future whereby communities from below both activists and people simply following their communal interests can come together to create a society that overcomes racism Its final chapter is a hopeful call by Immanuel Wallerstein for people to make small changes that together can bring real about real revolutionary change

**Globalization and the Environment** ,2006-06-01 What is missing in the mounting literature on globalization is a focused theoretical foundation with parallel empirical examinations of global structures and their environmental consequences The articles in this volume examine how the world economy and related non economic forms of global structuring impact the natural environment and the living conditions of human populations living across the globe Environmental dynamics in areas as diverse as Ancient Egypt and the Modern Amazon are presented for readers who are new to the world systems approach and for others interested in recent efforts to link environmental outcomes and antecedents to global processes World Cities in a World-System Paul L.
