**Esquivel! Space-Age Sound Artist** Susan Wood, 2016-09-06 A playful picture book biography of the father of space age bachelor pad lounge music Gorgeously illustrated by Duncan Tonatiuh this lively biography follows Juan Garcia Esquivel from Mexico to New York City Juan grew up to the sounds of mariachi bands he loved music and became a musical explorer Defying convention he created music that made people laugh and planted images in their minds His musical dreams brought him from Mexico to America and gained him worldwide renown Juan s space age lounge music popular in the fifties and sixties has found a new generation of listeners This account honors Esquivel as one of the great composers of the 20th century

**The Heavens and the Earth** Walter A. McDougall, 1997-10-24 McDougall covers the first twenty five years of space travel from Sputnik to the Pioneer 10 including the industry surrounding space exploration political machinations relevant to the Cold War and social effects from an age where the heavens were transformed into outer space

Remembering the Space Age Steven J. Dick, 2008 From the Publisher Proceedings of October 2007 conference sponsored by the NASA History Division and the National Air and Space Museum to commemorate the 50th anniversary of the Sputnik 1 launch in October 1957 and the dawn of the space age

**Dawn of the Space Age** Robin Kerrod, 2004-07-04 Introduces the early history of space flight including the Chinese invention of the rocket the pioneering ideas of Tsiolkovsky the early experiments of Goddard and various rocket and satellite launchings up through 1967

**Spacewear** Barbara Brownie, 2019-01-10 Today we are living in the New Space Age where mass commercial space travel is almost within our grasp This otherworldly possibility has opened up new cultural images of space both real and fictional and has caused fashion design and spacesuit engineering to intersect in new exciting ways Spacewear traverses this uncharted territory by exploring the changing imagination of space in fashion and fashion in space from the first Space Age to the 21st century Exploring how space travel has stylistically and technologically framed fashion design on earth and how we need to revisit established design practices for the weightless environment Spacewear connects the catwalk and the space station This book draws together speculative fantasies in sci fi films such as Star Trek and 2001 A Space Odyssey with the engineered spacesuits Biosuit and the NASA Z 2 and with catwalk interpretations by the likes of Alexander McQueen Hussein Chalayan Andr Courr ges and Iris van Herpen While the development of commercial space agencies has led to new concerns for style in garments for outer space that re think fundamental design principles such as drape high fashion has experimented with new possibilities for weightlessness that extend far beyond the 1960s vision of Space Age metallic fabrics and helmet style headwear Brownie takes the reader on a fascinating journey from fantasy to function and to form deepening our understanding of this new category of fashion that is prompting new approaches to garment design and construction both on earth and in outer space

The Long Space Age Alexander MacDonald, 2017-04-25 An economic historian traces uncovers the story of privately funded space exploration from early 19th century astronomical observatories to SpaceX The standard

historical narrative of American space exploration begins during the Cold War with the federal government's efforts to beat the Soviet Union in the Space Race. Given this framing, the more recent emergence of private sector space exploration appears to be a new and controversial phenomenon. But as Alexander MacDonald argues in *The Long Space Age*, privately funded space exploration had been happening in the United States long before we tried to put a man on the moon. Since the early 19th century, private observatories had been making discoveries and developing technologies that led directly to NASA's epochal 20th century achievements. And their efforts were no less ambitious for their time than SpaceX and Blue Origin are in today's resurgent space industry. *The Long Space Age* examines the economic history of this century's long development from those first American observatories to the International Space Station.

*The Unconstructable Earth* Frédéric Neyrat, 2018-10-16 Winner Grand Prize French Voices Award for Excellence in Publication and Translation

*The Space Age is over*. Not at all. A new planet has appeared: Earth. In the age of the Anthropocene, the Earth is a post-natural planet that can be remade at will, controlled and managed thanks to the prowess of geoengineering. This new imaginary is also accompanied by a new kind of power, geopolitics, that takes the entire Earth in its social, biological, and geophysical dimensions as an object of knowledge, intervention, and governmentality. In short, our rising awareness that we have destroyed our planet has simultaneously provided us not with remorse or resolve but with a new fantasy: that the Anthropocene delivers an opportunity to remake our terrestrial environment thanks to the power of technology. Such is the position we find ourselves in when proposals for reengineering the Earth's ecosystems and geosystems are taken as the only politically feasible answer to ecological catastrophe. Yet far from being merely the fruit of geo-capitalism, this new grand narrative of geopolitics has also been activated by theorists of the constructivist turn, ecomodernist, postenvironmentalist, accelerationist, who have likewise called into question the great divide between nature and culture. With the collapse of this divide, a cyborg hybrid, flexible nature has been built: an impoverished nature that does not exist without being performed by technologies that proliferate within the space of human needs and capitalist imperatives. Underneath this performative vision resides a hidden anaturalism, denying all otherness to nature and the Earth no longer by externalizing it as a thing to be dominated but by radically internalizing it as something to be digested. Constructivist ecology thus finds itself in no position to confront the geoconstructivist project with its claim that there is no nature and its aim to replace Earth with Earth 2.0. Against both positions, Neyrat stakes out the importance of the unconstructable Earth. Against the fusional myth of technology over nature but without returning to the division between nature and culture, he proposes an ecology of separation that acknowledges the wild subtractive capacity of nature. Against the capitalist technocratic delusion of Earth as a constructible object but equally against an organicism marked by unacknowledged traces of racism and sexism, Neyrat shows what it means to appreciate Earth as an unsubstitutable becoming, a trajectory that cannot be replicated in a laboratory. Underway for billions of years, withdrawing into the most distant past and the most inaccessible future, Earth escapes the hubris of all who would remake

and master it This remarkable book which will be of interest to those across the humanities natural sciences and social sciences from theorists to shapers of policy recasts the earth as a singular trajectory that invites humans to turn political ecology into a geopolitics *Joint Force Quarterly* ,2008 *Magic Lands* John M. Findlay,1993-09-22 The American West conjures up images of pastoral tranquility and wide open spaces but by 1970 the Far West was the most urbanized section of the country Exploring four intriguing cityscapes Disneyland Stanford Industrial Park Sun City and the 1962 Seattle World s Fair John Findlay shows how each created a sense of cohesion and sustained people s belief in their superior urban environment This first book length study of the urban West after 1940 argues that Westerners deliberately tried to build cities that differed radically from their eastern counterparts In 1954 Walt Disney began building the world s first theme park using Hollywood s movie making techniques The creators of Stanford Industrial Park were more hesitant in their approach to a conceptually organized environment but by the mid 1960s the Park was the nation s prototypical research park and the intellectual downtown for the high technology region that became Silicon Valley In 1960 on the outskirts of Phoenix Del E Webb built Sun City the largest most influential retirement community in the United States Another innovative cityscape arose from the 1962 Seattle World s Fair and provided a futuristic somewhat fanciful vision of modern life These four became magic lands that provided an antidote to the apparent chaos of their respective urban milieus Exemplars of a new lifestyle they are landmarks on the changing cultural landscape of postwar America **Critical issues in the history of spaceflight** Steven J. Dick,2018
