Imbriale, Steven Shichang Gao, Luigi Boccia, 2012-06-25 This book addresses a broad range of topics on antennas for space applications. First, it introduces the fundamental methodologies of space antenna design, modelling and analysis, as well as the state of the art and anticipated future technological developments. Each of the topics discussed is specialized and contextualized to the space sector. Furthermore, case studies are also provided to demonstrate the design and implementation of antennas in actual applications. Second, the authors present a detailed review of antenna designs for some popular applications such as satellite communications, spaceborne synthetic aperture radar (SAR), Global Navigation Satellite Systems (GNSS) receivers, science instruments, radio astronomy, small satellites, and deep space applications. Finally, it presents the reader with a comprehensive path from space antenna development basics to specific individual applications. **Key Features:** Presents a detailed review of antenna designs for applications such as satellite communications, spaceborne SAR, GNSS receivers, science instruments, small satellites, radio astronomy, deep space applications. Addresses the space antenna development from different angles, including electromagnetic, thermal, and mechanical design strategies required for space qualification.
