Sparing Nature The Conflict Between Human Population Growth And Earths Biodiversity:

Sparing Nature Jeffrey K. McKee, 2003 Are humans too good at adapting to the earth's natural environment Every day there is a net gain of more than 200 000 people on the planet that's 146 a minute Has our explosive population growth led to the mass extinction of countless species in the earth's plant and animal communities Jeffrey K McKee contends yes The more people there are the more we push aside wild plants and animals In *Sparing Nature* he explores the cause and effect relationship between these two trends demonstrating that nature is too sparing to accommodate both a richly diverse living world and a rapidly expanding number of people The author probes the past to find that humans and their ancestors have had negative impacts on species biodiversity for nearly two million years and that extinction rates have accelerated since the origins of agriculture Today entire ecosystems are in peril due to the relentless growth of the human population McKee gives a guided tour of the interconnections within the living world to reveal the meaning and value of biodiversity making the maze of technical research and scientific debates accessible to the general reader Because it is clear that conservation cannot be left to the whims of changing human priorities McKee takes the unabashedly neo Malthusian position that the most effective measure to save earth's biodiversity is to slow the growth of human populations By conscientiously becoming more responsible about our reproductive habits and our impact on other living beings we can ensure that nature's services will make our lives not only supportable but also sustainable for this century and beyond *Sparing Nature: The Conflict*

Troy Burnett, 2016-09-19 Natural resource and environmental conflicts have long been issues confronting human societies This case based examination of a wide range of natural resource disputes exposes readers to many contemporary examples that offer reasons for both hope and concern The Rwandan genocide the Sudanese civil war and perpetual instability in the Middle East and Africa each of these crises have arguably been instigated and maintained by natural resource disputes China has undertaken a Herculean task to plant hundreds of millions of trees along its margins in an effort to save Beijing from crippling dust storms and halt the expansion of the Gobi desert Will it work and is it worth it These and many other cases of conflict stemming from natural resource or environmental concerns are explained and debated in this up to date examination of contemporary and ongoing topics The book examines conflicts over precious resources and minerals such as diamonds oil water and fisheries as well as the pursuit of lesser known minerals like Coltan and other rare earth elements important resources in our technological age in remote locations such as Greenland and the Congo Each topic contains an overview and two position essays from different authors thereby providing the reader with highly informative and balanced perspectives Reference entries accompany each topic as well helping students to better understand each issue As the world hurtles into the 21st century these natural resource issues are becoming increasingly important with all global citizens having a significant stake in how these conflicts arise and play out **Biodiversity of Wetlands and Forests: A Nature Trail** Hiren

Biological Diversity L. N. Petrov,2003 One of the cornerstones of life s wonders is the vast array of species filling the planet From plants to animals to humans there is no shortage of beings to provide spice of life variety is said to be Periodically scientists announce the discovery of a new form of life so it seems as if Earth is capable of producing new species just to keep us on our toes At times the immense breadth of living things can even feel overwhelming as one pauses to ponder how numerically insignificant humans are when compared to the insect population Given the biological diversity of the planet it is incumbent upon humans to safeguard the natural beauty of the environment To that end conservation takes on special importance necessitating the balancing of industrial expansion with preserving the flora and fauna surrounding us This book is an important tool in understanding and researching the many different life forms spanning the globe Collected here is a substantial and carefully selected listing of relevant literature on biological diversity and its conservation Following this bibliography are author title and subject indexes to allow for further access to this information The sheer bulk of the works about biological diversity can be so intimidating that a book such as this one becomes useful in sorting through the resources about the importance of life s variety **Exploring Environmental Issues** David D.
