Spatial Hysteresis and Optical Patterns Nikolay N. Rosanov, 2002-04-11 From the reviews This book is very well written and contains many important and new original results that certainly play an important role in today's nonlinear optics Physicalia **Nonlinear Optical Systems** Luigi Lugiato, Franco Prati, Massimo Brambilla, 2015-03-05 Guiding graduate students and researchers through the complex world of laser physics and nonlinear optics this book provides an in depth exploration of the dynamics of lasers and other relevant optical systems under the umbrella of a unitary spatio temporal vision Adopting a balanced approach the book covers traditional as well as special topics in laser physics quantum electronics and nonlinear optics treating them from the viewpoint of nonlinear dynamical systems These include laser emission frequency generation solitons optically bistable systems pulsations and chaos and optical pattern formation It also provides a coherent and up to date treatment of the hierarchy of nonlinear optical models and of the rich variety of phenomena they describe helping readers to understand the limits of validity of each model and the connections among the phenomena It is ideal for graduate students and researchers in nonlinear optics quantum electronics laser physics and photonics

Patterns and Interfaces in Dissipative Dynamics L.M. Pismen, 2006-07-07 Spontaneous pattern formation in nonlinear dissipative systems far from equilibrium is a paradigmatic case of emergent behaviour associated with complex systems It is encountered in a great variety of settings both in nature and technology and has numerous applications ranging from nonlinear optics through solid and fluid mechanics physical chemistry and chemical engineering to biology Nature creates its variety of forms through spontaneous pattern formation and self assembly and this strategy is likely to be imitated by future biomorphic technologies This book is a first hand account by one of the leading players in this field which gives in depth descriptions of analytical methods elucidating the complex evolution of nonlinear dissipative systems and brings the reader to the forefront of current research The introductory chapter on the theory of dynamical systems is written with a view to applications of its powerful methods to spatial and spatio temporal patterns It is followed by two chapters treating moving interfaces based largely on reaction diffusion and phase separating systems The following two chapters on amplitude equations for patterns and waves describe universal phenomena generated by representative equations which can be derived for a variety of non equilibrium systems originating in fluid mechanics physical chemistry or nonlinear optics This book addresses graduate students and non specialists from the many related areas of applied mathematics physical chemistry chemical engineering and biology as well as the seasoned scientist in search of a modern source of reference **Nonlinear Photonics and Novel Optical Phenomena** Zhigang Chen, Roberto Morandotti, 2012-06-27 Nonlinear Photonics and Novel Optical Phenomena contains contributed chapters from leading experts in nonlinear optics and photonics and provides a comprehensive survey of fundamental concepts as well as hot topics in current research on nonlinear optical waves and related novel phenomena The book covers self accelerating airy beams integrated photonics based on high index doped silica
