Teaching Children About Health A Multidisciplinary Approach:

Teaching Children about Health Estelle Weinstein, Efreem Rosen, 2003 TEACHING CHILDREN ABOUT HEALTH takes a case study approach and is written especially for the elementary classroom teacher. The goal of this text is to help teachers become more knowledgeable about and comfortable with health topics to be more reflective in their practice of teaching about health and better equipped with activities for incorporating health subjects into their curriculum. Each chapter considers health from a physical, social, and emotional perspective, acknowledging the mind-body connection. The authors include topics that are relevant in children's lives using a wellness preventive health model. In addition, each chapter provides activities that can be integrated into several disciplines found in most elementary school curricula. This text is meant to provide elementary school classroom teachers with the incentive and knowledge base they will need to include interdisciplinary lessons about the various health content areas in their daily teaching. It recognizes that since most elementary school programs do not have separate health education experiences for students and since these are the primary learning years, it is the responsibility of the classroom teacher to initiate learning about health.

Head Start Nutrition Education Curriculum ,1989 *International Handbook of Urban Education* William T. Pink, George W. Noblit, 2008-09-03 It is evident that urban education has become the central focus of educators at the present time In the U S for example almost one third of all school age children attend schools in large urban

school districts It is in these urban schools where the diversity of cultures and languages is highest and where student learning is most problematic What has emerged from recent work to improve urban schools is the insight that there is no one size fits all panacea Rather we have discovered that the local context shapes in critically important ways what will be effective at the school level The universality of the problematics with urban education together with the importance of understanding the local or situated context of improvement interventions brings into sharp focus the importance and timeliness of an undertaking like the International Handbook of Urban Education An important focus of the International Handbook of Urban Education will be the interrogation of both the social and political factors that lead to different problem posing and subsequent solutions within each region An important question to be answered for example is what it takes in terms of resources political will and policy actions to improve urban education
