Resources in Education, 2001 *Handbook of Research on Interdisciplinarity Between Science and Mathematics in Education* Cavadas, Bento, Branco, Neusa, 2023-01-24 Working in an interdisciplinary manner is long pursued but a difficult goal of science and mathematics education The interdisciplinarity of science and mathematics can occur when connections between those disciplines are identified and developed These connections could be expressed in the educational policies curriculum or in the science and mathematics teachers educational practices Sometimes those connections are scarce but in other moments full integration is achieved The Handbook of Research on Interdisciplinarity Between Science and Mathematics in Education presents results of good practices and interdisciplinary educational approaches in science and mathematics It presents a broad range of approaches for all educational levels from kindergarten to university Covering topics such as computer programming mathematics in environmental issues and simple machines this major reference work is an excellent resource for administrators and educators of both K 12 and higher education government officials pre service teachers teacher educators librarians researchers and academicians

From 'Science in the Making' to Understanding the Nature of Science Mansoor Niaz, 2012-02-06 The Nature of Science is highly topical among science teacher educators and researchers Increasingly it is a mandated topic in state curriculum documents This book draws together recent research on Nature of Science studies within a historical and philosophical framework suitable for students and teacher educators

Traditional science curricula and textbooks present science as a finished product. Taking a different approach, this book provides a glimpse of science in the making: scientific practice imbued with arguments, controversies, and competition among rival theories and explanations. Teaching about science in the making is a rich source of motivating students to engage creatively with the science curriculum. Readers are introduced to science in the making through discussion and analysis of a wide range of historical episodes from the early 19th century to early 21st century. Recent cutting edge research is presented to provide insight into the dynamics of scientific progress. More than 90 studies from major science education journals related to nature of science are reviewed. A theoretical framework field tested with in-service science teachers is developed for moving from science in the making to understanding the Nature of Science.
