Gurung, 2023-07-03 What is distinctive about the ways specific disciplines are traditionally taught and what kinds of learning do they promote Do they inspire the habits of the discipline itself or do they inadvertently contradict or ignore those disciplines By analyzing assumptions about often unexamined teaching practices their history and relevance in contemporary learning contexts this book offers teachers a fresh way to both think about their impact on students and explore more effective ways to engage students in authentic habits and practices This companion volume to *Exploring Signature Pedagogies* covers disciplines not addressed in the earlier volume and further expands the scope of inquiry by interrogating the teaching methods in interdisciplinary fields and a number of professions critically returning to Lee S Shulman's origins of the concept of signature pedagogies This volume also differs from the first by including authors from across the United States as well as Ireland and Australia The first section examines the signature pedagogies in the humanities and fine arts fields of philosophy foreign language instruction communication art and design and arts entrepreneurship The second section describes signature pedagogies in the social and natural sciences political science economics and chemistry Section three highlights the interdisciplinary fields of Ignatian pedagogy women's studies and disability studies and the book concludes with four chapters on professional pedagogies nursing occupational therapy social work and teacher education that illustrate how these pedagogies change as the social context changes as their knowledge base expands or as online delivery of instruction increases

Fernig,J. Bowen,2012-12-06 In 1979 the International Rel iel1 of Education celebrated its twenty fifth anniversary This book which now reproduces the two Jubilee issues of that Review has been published for a number of reasons One is the importance of the topics dealt with The last twenty five years have seen unprecedented developments in education right across the world in industrialised countries no less than in those which are still approaching that phase From time to time it is essential to look back over the past and take stock of how the present situation has come about to disentangle the trends and sort out from the welter of ideas those which turned out to be non starters those which died in their tracks and those which came to stay This is only possible after a certain passage of time has set events in proportion and in perspective The twenty five years which have elapsed since the IRE was started ten years after the ending of World War II would seem to be just long enough to make this possible though when the IRE celebrates its fiftieth Jubilee in the year 2004 some of the trends which now seem so definite may themselves have died away to be replaced by others which can now be only dimly conceived Another reason

for this publication is the quality and standing in the world of education and scholarship of the two editors and their contributors

The Creative University Michael A. Peters, Tina Besley, 2013-09-03 The concept of the Creative University signals that higher education stands at the center of the creative economy, indicating the growing significance of intellectual capital and innovation for economic growth and cultural development. Increasingly, economic activity is socialised through new media and depends on immaterial and digital goods. This immaterial economy includes new international labour markets that demand analytic skills, global competencies, and an understanding of markets in tradeable knowledges. Delivery modes in education are being reshaped. Global cultures are spreading in the form of knowledge and research networks. Openness, networking, cross-border people movement, flows of ideas, capital, and scholars are changing the conditions of imagining and producing creative work. The economic aspect of creativity refers to the production of new ideas, aesthetic forms, scholarship, original works of art, and cultural products, as well as scientific inventions and technological innovations. It embraces both open-source communication as well as commercial intellectual property. This collection explores these ideas as the basis for a new development agenda.

Kinchin, Karen Gravett, 2022-01-13 This book examines the dominant discourses in higher education From the moment teachers enter higher education they are met with dominant discourses that are often adopted uncritically including concepts such as teaching excellence student voice and student engagement Teachers are also met with simplistic binaries such as teaching vs research quantitative vs qualitative research and constructivists vs positivists Kinchin and Gravett suggest that this may present a distorted view contributing to the

disconnect between the aims and observable practice of higher education Rather than celebrating difference dominant discourses tend to seek similarities in an attempt to simplify and manage the environment In this book the authors share their belief that teaching and learning should be a thoughtful endeavour Thinking with a breadth of theories the authors explore the overlaps between different perspectives in order to offer a richer and more inclusive interrogation of the dominant discourses that pervade higher education Offering methodological approaches to explore these perspectives the authors bring together academics working in different parts of the university and examine the concept of a rich cartography considering how this can offer meaning within higher education research and practice
