**European Economic Integration as a Challenge to Industry and Government** Richard Tilly, Paul J.J. Welfens, 2013-12-14 explicit presentation of some of those stylized facts in the form of a brief chronologically structured narrative In keeping with the broad scope of this volume we begin by going back at least two hundred years to the growth of an integrated national capital market in England in the 18th century see Neal Chapter This starting point has the advantage of calling attention to a number of important points First the form of integration by which a central market London for a standardized good government bonds or consols came to serve as linkage between two or more hitherto separate regional markets represents a typical and important form of financial and economic

integration In Kindleberger's terminology it is the integration via third parties form where say security prices in A and B converge 2 A C B instead of A B In the 18th century English context this central market provided a widely available index of the opportunity costs of alternative investments the importance of which should not be underestimated for it contributed to national economic integration in England NEAL 1994 Second this example illustrates an important point of political economy The prerequisite for the development of the central market mentioned was the establishment of sound public finances based on the state's widely accepted power to tax *Resources in Education*, 1997 *The American Technological Challenge* Jan Vijg, 2011 The American Technological Challenge Stagnation and Decline in the 21st Century refutes the myth that we live in the most innovative of times Inventions themselves are only one of the factors that determine the technological fate of a society Sometimes inventions are adopted and eagerly sometimes not The history of technological progress and the historical and societal factors that impel or restrain the adoption of inventions are explored in the book New life changing inventions have become rare and in spite of ample vocal support of innovation an increasingly complacent society has lost its taste for risk and often actively resists change Far from being unique technology slowdowns are recurrent events in history occurring in civilizations that have reached the zenith of their success They are the inevitable fate of an increasingly regulated successful society Most people would characterize the dawn of the 21st century as the age of technological progress par excellence If you are one of them then think again While our parents grandparents and great grandparents witnessed life changing inventions every decade very little major new technology has seen the light of day over the last half century We find ourselves in the midst of a technology slowdown This book is about the causes and consequences of technology slowdowns which are not unique but recurrent events in human history They occur not in times of upheaval when violent interstate conflicts are the order of the day Such periods foster innovation and allow major breakthrough inventions to be adopted quickly Instead innovation seriously stalls in times that are peaceful when governments reign supreme and citizens are encapsulated by layers of benign regulation to protect them against all possible harm We find ourselves in the best of times The long period of bloody combat that characterized so much of the 20th century has finally ended Violent conflicts between states are minimal and conditions for almost everyone on the planet are on an upswing with poverty on the decline and life expectancy and literacy increasing Responsible government and industry leaders have begun to refrain from risky bets on exciting new exploits and the time of grand projects such as the Eisenhower Interstate System the Moon Landing Program or the development of the internet is behind us Instead we have to make do with incremental improvements of existing technology catch up programs in developing countries and social programs The consequences are stalling wealth generation and an end to the dramatic changes society has undergone since the industrial revolution now more than 200 years ago
