Elite Technical Services: Where business and family DO mix

For 30 years, Elite Technical has been happily disproving the theory that business and family don't mix. The innovative technology recruiting company, headed up by Joseph Monaco and his mother, Donna Keller, not only includes multiple family members, but also benefits from an extended "family" of long-time employees, valued clients and even a host of charities that benefit with each new placement the firm makes.

Inspired by his grandfather, who owned one of the biggest electrical contracting companies on Long Island, Monaco began his entrepreneurial journey right out of college, having returned to New York from Florida with a dream of starting a technical recruiting company. At 22, he had only a year and a half of experience in the recruiting industry, but he had a strong vision and was seeking an investor to put the wheels in motion. Fortunately, he jokes, he didn't find one. Instead, his mother and stepfather, Donna and Bruce Keller, stepped in. "They took an interest in starting the business together, and they believed in me, so much so, that they took a mortgage on their own home to get the company started."

To provide a physical location, family and friends helped finish their home basement, adding an office and bullpen area, while the capital from the mortgage provided start-up funds for payroll and other expenses. In short order, the business was up and running.

Because his three younger siblings lived there, the business became part of their lives as well. They literally grew up in it, learning to be quiet during business hours, listening to the recruiters doing their work - and eventually two of them successfully joined the company.

While Monaco didn't yet have decades of experience, he did have the wisdom to recognize that good employees

are the backbone of any great company and respect goes a long way to attracting and keeping them. "There is no doubt the reason we're successful is the talent and longevity of our employees and the amazing work that they do," he said.

"The people we have are exceptional, and we've developed a learning culture where we all tap into the intellectual capital of the group and ask our people to be as innovative as they can. With a focus on speed, quality and diversity, we recognize that no one person has a monopoly

Signs, Genres, and Communities in Technical Communication M. Jimmie Killingsworth, Michael Gilbertson, 2018-12-20 This important new text invites readers to step back from their busy professional lives and look at technical communication philosophically to ask fundamental questions such as what does it mean to communicate and how do language and graphics the signs or tools of the technical communicator relate to action in a technological world Through this excursion in the theory of technical discourse you will discover a fresh approach to reports manuals and proposals produced and consumed daily in business government and research organizations around the world The authors examine familiar genres in two relatively new ways

HRM, Technical Workers and the Multinational Corporation Patrick McGovern, 2012-10-12 This book is the first major in depth study of the impact of contemporary management practices on a rapidly expanding set of white collar occupations namely technical workers It investigates whether HRM schemes such as employee appraisals and performance related pay have transformed technical work to such an extent that it can no longer be described as a service contract The book contains detailed examination of the nature of managerial control over employees who by virtue of their commitment present their employers with problems that are often ignored by prescriptive models of HRM The empirical evidence features case studies of matched pairs of hi tech firms in the Irish Republic The author examines recent debates about the nature of employment and the role of the multinational corporations within the so called Celtic Tiger Irish economy

China Rudi Volti,2019-07-11 This study is the first to summarize the major technological policies implemented in China since 1949 and to place them in their social and historical context Dr Volti looks at technological change in China as part of a broader process of economic political cultural and organizational change focusing primarily on four key areas agriculture energy ground transportation and medicine and public health He emphasizes how technological change has been shaped by political and ideological structures notes how China s unique cultural heritage has affected adoption of technologies developed outside China and assesses China s success in developing technologies appropriate to its specific needs as an economically and politically developing nation He draws on interviews with technicians engaged in the transfer of technology to China as well as extensive primary source materials **Weapons Under Fire** Lauren Holland,2013-11-26 First Published in 1997 In an effort to find the validity of middle ground this book offers a comprehensive analysis that looks further than the House Committee on National Security s actions on the B 2 bomber President Clinton s campaign promise to support the

It provides a dissection of the decision making process for a representative sample of major weapons systems to invalidate the claims that pork and malfeasance are both pervasive and determinate. *Nuclear Politics* James M. Jasper, 2014-07-14 Why did nuclear energy policies in France, Sweden and the United States very similar at the time of the oil crisis of 1973 and 1974 diverge so greatly in the following years? In answering this question James Jasper challenges one of the most popular trends in political analysis: explanations relying exclusively on political and economic structures to account for public policies. Jasper proposes a new cultural and state centered approach, one heeding not only structural factors but cultural meanings, individual biographies and elite discretion. Surveying the period from the successful commercialization of light water reactor technology in the early 1960s to the present, he explains the events that occurred after 1973: France built even more reactors than it needed, the United States canceled most reactor orders and Sweden completed planned nuclear plants but decided to phase out nuclear energy by 2010. This work is based on one hundred interviews with managers, policymakers and activists in the three countries. In addition to providing a unique theoretical perspective, it broadens our understanding of nuclear policy by looking at three countries in depth and over a long historical span. Specifically with regard to the relationship between women and computers, a diverse body of commentary has embraced the views of those who have found grounds for expressing pessimism about this association and those who have favoured a more optimistic assessment of the current situation and its probable future development. This book undertakes a thorough evaluation of the legitimacy and predictive power of the optimistic commentary. Using a large body of original qualitative data, it interrogates the bases of what it identifies as three waves of optimism and, in doing so, provides answers to some of the key questions asked in this field today. *The Enlightenment Project in the Analytic Conversation* N. Capaldi, 2013-04-17 Analytic philosophy has been a dominant intellectual movement in the 20th century and a reflection of the cultural pre-eminence of scientism. In response to analytic philosophy's peculiar reticence and inability to discuss itself, this book provides its first comprehensive history and critique. The central element in the analytic conversation has been the Enlightenment Project: the appeal to an autonomous human reason freed of any higher

authority and channeling itself through science as its privileged tool This centrality is demonstrated by systematically examining its presence and development in the philosophy of science metaphysics epistemology language psychology social science ethics political philosophy and the history of philosophy This journey highlights the internal logical disintegration of that project Post modern relativism is its natural offspring and not a viable alternative The Enlightenment Project's conception of physical science is defective this defective conception of physical science renders the analytic conception of social science philosophical psychology and epistemology defective and that defective conception of the human condition leads to defective conceptions of both moral and political philosophy specifically the idea of social engineering or social technology Throughout the book an alternative conception of philosophy is presented as a way out of the abyss of analysis an alternative that reconnects philosophy with the mainstream of Western civilization and initiates the process of providing a coherent cultural narrative This book will be of particular interest to any sophisticated reader concerned about the lack of a coherent cultural narrative A Way Through the Global Techno-Scientific Culture Sheldon Richmond,2020-04-07

Computers are supposed to be smart yet they frustrate both ordinary users and computer technologists Why are people frustrated by smart machines Computers don't fit people People think in terms of comparisons stories and analogies and seek feedback whereas computers are based on a fundamental design that does not fit with analogical and feedback thinking They impose a binary an all or nothing approach to everything Moreover the social world and institutions that have developed around computer technology hide and reinforce the lack of alignment between computers and people This book suggests a solution we do not have to accept the way things are now and work around the bad social and technical design of computers Rather it proposes a diverse distributed critical discussion of how to design and build both computer technology and its social institutions Gender and the Digital Economy Cecilia Ng,Swasti Mitter,2005-11-05 In the global discourse on ICTs the
