Technics Civilization:

Technics and Civilization Lewis Mumford, 2010-10-30 *Technics and Civilization* first presented its compelling history of the machine and critical study of its effects on civilization in 1934 before television the personal computer and the Internet even appeared on our periphery Drawing upon art science philosophy and the history of culture Lewis Mumford explained the origin of the machine age and traced its social results asserting that the development of modern technology had its roots in the Middle Ages rather than the Industrial Revolution Mumford sagely argued that it was the moral economic and political choices we made not the machines that we used that determined our then industrially driven economy Equal parts powerful history and polemic criticism *Technics and Civilization* was the first comprehensive attempt in English to portray the development of the machine age over the last thousand years and to predict the pull the technological still holds over us today The questions posed in the first paragraph of *Technics and Civilization* still deserve our attention nearly three quarters of a century after they were written *Journal of Technology and Culture* **The Future of Technics & Civilization** Lewis Mumford, 1986 A brilliant survey of our response to changing technology which sets out the prerequisites for a rational use of our discoveries and inventions as a means of human liberation rather than enslavement **Technics and Civilization** Lewis Mumford, 1965 **Technics and Civilization** Lewis Mumford, 1963 Traces the evolution of the machine and describes its effects on man and his environment **Henry Ford, Mass Production, Modernism, and Design** Ray Batchelor, 1994 Henry Ford is often thought of as being the ultimate American folk hero who developed one of the most important changes to 20th century American society mass production With his successive teams of engineers Ford developed technologies which placed the motor car at the disposal of millions of people freeing them from previous notions of distance and space and re shaping the modern urban environment worldwide *Reframing Technology* Kent Hufford, 2024-07-22 For over a hundred years technological change has been framed using a simple narrative technology drives history *Reframing Technology* challenges this idea of technological determinism through metahistorical and literary analyses that locate the birth of contingent frameworks in the historiography of technology in and around the 1930s The book also traces how the formal discipline of the History of Technology was remarkably preconfigured by four North American authors who were not professional historians Thorstein Veblen Stuart Chase Lewis Mumford and Marshall McLuhan They are considered as a continuum and are put in dialogue despite their training in different disciplines Their work is then linked up with the emergence of formal and institutional inquiry into narratives of technology at the end of the twentieth century The ideas in the book are applied to current discussions about the future of technology and artificial intelligence The book's main argument is that as the authors listed above suggest we need to think beyond the machine and reframe technology as a cultural practice rather than thinking of it as an object or a tool **Fifty Key Works of History and Historiography** Kenneth R. Stunkel, 2012-05-23 *Fifty Key Works of History and Historiography* introduces some of the most important works

ever written by those who have sought to understand capture query and interpret the past The works covered include texts from ancient times to the present day and from different cultural traditions ensuring a wide variety of schools methods and ideas are introduced Each of the fifty texts represents at least one of six broad categories early examples of historiography e g Herodotus and Augustine non western works e g Shaddad and Fukuzawa Critical historiography e g Mabillon and Ranke history of minorities neglected groups or subjects e g Said and Needham broad sweeps of history e g Mumford and Hofstadter problematic or unconventional historiography e g Foucault and White Each of the key works is introduced in a short essay written in a lively and engaging style which provides the ideal preparation for reading the text itself Complete with a substantial introduction to the field this book is the perfect starting point for anyone new to the study of history or historiography

Fifty Years of Medieval Technology and Social Change Steven A. Walton, 2019-08-22 This volume brings together a series of papers at Kalamazoo as well as some contributed papers inspired by the fiftieth anniversary of the publication of Lynn White Jr s *Medieval Technology and Social Change* 1962 a slim study which catalyzed the study of technology in the Middle Ages in the English speaking world While the initial reviews and decades long fortune of the volume have been varied it is still in print and remains a touchstone of an idea and a time The contributors to the volume therefore both investigate the book itself and its fate and look at new research furthering and inspired by White s work The book opens with an introduction surveying White s career with a bibliography of his work as well as some opening thoughts on the study of medieval technology in the last fifty years Three papers then deal explicitly with the reception and longevity of his work and its impact on medieval studies more generally Then five papers look at new cast studies areas where White s work and approach has had a particular impact namely medieval technology studies and medieval rural ecological studies

Thinking through Technology Carl Mitcham, 2024-05-31 What does it mean to think about technology philosophically Why try These are the issues that Carl Mitcham addresses in this work a comprehensive critical introduction to the philosophy of technology and a discussion of its sources and uses Tracing the changing meaning of technology from ancient times to our own Mitcham identifies the most important traditions of critical analysis of technology the engineering approach which assumes the centrality of technology in human life and the humanities approach which is concerned with its moral and cultural boundaries Mitcham bridges these two traditions through an analysis of discussions of engineering design of the distinction between tools and machines and of engineering science itself He looks at technology as it is experienced in everyday life as material objects from kitchenware to computers as knowledge including recipes rules theories and intuitive know how as activity design construction and use and as volition knowing how to use technology and understanding its consequences By elucidating these multiple aspects Mitcham establishes criteria for a more comprehensive analysis of ethical issues in applications of science and technology This book will guide anyone wanting to reflect on technology and its moral implications

Conserving Cultures Harry Redner, 2004-02-13 As the forests are felled cultures are destroyed In

our technological civilization the forces of globalization are a threat to both nature and culture The many and varied cultures of the world are beset by the homogenizing impact of the global media which represents the triumph of technics The fate can only be averted by a concerted effort at culture conservation Nature and culture must be protected to preserve a humanly habitable world Conserving Cultures is the first book to link nature and culture conservation The threat to nature is now well understood how it relates to cultures is not This book both describes and analyzes theoretically the danger to culture and proposes practical remedial measures

Race and Modern Architecture Irene Cheng, Charles L. Davis II, Mabel O. Wilson, 2020-05-26 Although race a concept of human difference that establishes hierarchies of power and domination has played a critical role in the development of modern architectural discourse and practice since the Enlightenment its influence on the discipline remains largely underexplored This volume offers a welcome and long awaited intervention for the field by shining a spotlight on constructions of race and their impact on architecture and theory in Europe and North America and across various global contexts since the eighteenth century Challenging us to write race back into architectural history contributors confront how racial thinking has intimately shaped some of the key concepts of modern architecture and culture over time including freedom revolution character national and indigenous style progress hybridity climate representation and radicalism By analyzing how architecture has intersected with histories of slavery colonialism and inequality from eighteenth century neoclassical governmental buildings to present day housing projects for immigrants *Race and Modern Architecture* challenges complicates and revises the standard association of modern architecture with a universal project of emancipation and progress

Jacques Ellul and the Technological Society in the 21st Century Helena M. Jerónimo, José Luís García, Carl Mitcham, 2013-07-08 This volume rethinks the work of Jacques Ellul 1912 1994 on the centenary of his birth by presenting an overview of the current debates based on Ellul's insights As one of the most significant twentieth century thinkers about technology Ellul was among the first thinkers to realize the importance of topics such as globalization terrorism communication technologies and ecology and study them from a technological perspective The book is divided into three sections The first discusses Ellul's diagnosis of modern society and addresses the reception of his work on the technological society the notion of efficiency the process of symbolization de symbolization and ecology The second analyzes communicational and cultural problems as well as threats and trends in early twenty first century societies Many of the issues Ellul saw as crucial such as energy propaganda applied life sciences and communication continue to be so In fact they have grown exponentially on a global scale producing new forms of risk Essays in the final section examine the duality of reason and revelation They pursue an understanding of Ellul in terms of the depth of experience and the traditions of human knowledge which is to say on the one hand the experience of the human being as contained in the rationalist sociological and philosophical traditions On the other hand there are the transcendent roots of human existence as well as revealed knowledge in the mystical and religious traditions The meeting of these two traditions enables us to look at Ellul's work as a

whole but above all it opens up a space for examining religious life in the technological society

The Struggle For Nature Jozet Keulartz, 2003-05-20 The Struggle for Nature outlines and examines the main aspects of current environmental philosophy including deep ecology social and political ecology eco feminism and eco anarchism It criticises the dependency on science of these philosophies and the social problems engendered by them The author argues for a post naturalistic turn in environmental philosophy The Struggle for Nature presents the most up to date arguments in environmental philosophy which will be valuable reading for students of applied philosophy environmental studies and geography

On the Evolution of Media Carlos A. Scolari, 2023-06-23 This book describes the lifecycle of media in the context of the media ecology presenting a general theoretical framework and a series of methodological procedures to support the construction of an eco evolutionary approach to media change Focusing on a series of processes emergence competition dominance hybridization adaptation extinction this book goes beyond a chronological approach to propose a reticulated and multi layered conception of media evolution If media evolution is a network what are the relationships between media species like What happens when a new media emerges into the media ecology How do new media influence the old ones Can media become extinct How do media adapt when the social and economic context changes How can media evolution be analysed What kinds of quantitative and qualitative techniques can be applied in media evolution research By presenting an innovative research approach and theoretical framework to media studies this book will be of keen interest to scholars and graduate students of new media media history and theory philosophy of technology mass communication and organisational studies

Taste and the Household Janet McCracken, 2001-09-20 By exploring the connections between aesthetic sensitivity and moral character this book connects them both to the larger cultural malaise It locates the relationship between human nature and moral reasoning in what the author calls domestic aesthetic skill bringing together moral and aesthetic judgment about little things that are close to home food clothing and furniture McCracken combines the study of modern moral theory with the study of modern economics contemporary popular culture advertising and design to help understand how heady theories become translated into everyday actions

The Enchantments of Mammon Eugene McCarraher, 2019-11-12 An extraordinary work of intellectual history as well as a scholarly tour de force a bracing polemic and a work of Christian prophecy McCarraher challenges more than 200 years of post Enlightenment assumptions about the way we live and work The Observer At least since Max Weber capitalism has been understood as part of the disenchantment of the world stripping material objects and social relations of their mystery and magic In this magisterial work Eugene McCarraher challenges this conventional view Capitalism he argues is full of sacrament whether one is prepared to acknowledge it or not First flowering in the fields and factories of England and brought to America by Puritans and evangelicals whose doctrine made ample room for industry and profit capitalism has become so thoroughly enmeshed in the fabric of our society that our faith in the market has become sacrosanct Informed by cultural history and theology as well as management theory The Enchantments of

Mammon looks to nineteenth century Romantics whose vision of labor combined reason creativity and mutual aid for salvation In this impassioned challenge to some of our most firmly held assumptions McCarraher argues that capitalism has hijacked our intrinsic longing for divinity and urges us to break its hold on our souls A majestic achievement It is a work of great moral and spiritual intelligence and one that invites contemplation about things we can t afford not to care about deeply Commonweal More brilliant more capacious and more entertaining page by page than his most ardent fans dared hope The magnitude of his accomplishment an account of American capitalism as a religion will stun even skeptical readers

Christian Century *On Interpretative Activity* Noel Boultin,2006-10-01 Using the ideas of the American scientist and philosopher Charles Sanders Peirce three conceptions of interpretation can be distinguished the Iconic the Indexical and the Intellective This trichotomy is based on Peirce s use of his sign theory and his logic of scientific discovery The Iconic captures what is valuable in itself for an individual interpreter as opposed to the Indexical which is available for public appreciation as an outcome beyond Interpretative activities The Intellective extends the Iconic to include the interpretative activities of groups of interpreters employing appropriate methods of inquiry in a more rigorous and rational way Such distinctions can be used in confronting certain problems in science technology and the arts

Technology Eric Schatzberg,2018-11-12 In modern life technology is everywhere Yet as a concept technology is a mess In popular discourse technology is little more than the latest digital innovations Scholars do little better offering up competing definitions that include everything from steelmaking to singing In *Technology Critical History of a Concept* Eric Schatzberg explains why technology is so difficult to define by examining its three thousand year history one shaped by persistent tensions between scholars and technical practitioners Since the time of the ancient Greeks scholars have tended to hold technicians in low esteem defining technical practices as mere means toward ends defined by others Technicians in contrast have repeatedly pushed back against this characterization insisting on the dignity creativity and cultural worth of their work The tension between scholars and technicians continued from Aristotle through Francis Bacon and into the nineteenth century It was only in the twentieth century that modern meanings of technology arose technology as the industrial arts technology as applied science and technology as technique Schatzberg traces these three meanings to the present day when discourse about technology has become pervasive but confusion among the three principal meanings of technology remains common He shows that only through a humanistic concept of technology can we understand the complex human choices embedded in our modern world

Body/Politics Thomas Shevory,2000-02-28 Negotiating the terrain between techno optimism and eco pessimism this work establishes the political connections between technologies of the body property and the environment Specific technologies of the body such as surrogacy and in vitro fertilization are examined in relation to their political and legal constructions Next Shevory analyzes private property as an evolving historical concept that implicates environmental and biological transformations with particular attention given to biotechnology cases He then considers the body s appearance and its

alterations through plastic surgery dieting or piercing as political constructions A theoretical overview specifies technoprogessivist liberal and technophobic traditions especially as they have evolved in the United States during the second half of the 20th century Drawing upon critical and feminist theories Shevory specifies a body politics that negotiates the terrain between these two traditions Body technologies and markets he argues interact to consolidate and reinforce dominant systems of power while at the same time resisting and sometimes subverting them Technology is often a factor in the fragmentation of evolving political ideological discourses on the left and right however the resulting instabilities create the potential for both the expansion of global capital and its subversion via democratic interventions *Social Ecology After Bookchin* Andrew Light, 1998-01-01 For close to four decades Murray Bookchin s eco anarchist theory of social ecology has inspired philosophers and activists working to link environmental concerns with the desire for a free and egalitarian society New veins of social ecology are now emerging both extending and challenging Bookchin s ideas For this instructive book Andrew Light has assembled leading theorists to contemplate the next steps in the development of social ecology Topics covered include reassessing ecological ethics combining social ecology and feminism building decentralized communities evaluating new technology relating theory to activism and improving social ecology through interaction with other left traditions
