Techniques And Concepts Of High Energy Physics Iii:

Techniques and Concepts of High-Energy Physics III Thomas Ferbel, 2012-12-06 The third Advanced Study Institute ASI on Techniques and Concepts of High Energy Physics was held at the Hotel on the Cay in the scenic harbor of Christiansted St Croix U S Virgin Islands Christiansted was the site of the first ASI and it was certainly a delight to return there again As in the previous ASI s the aim was to bring together a small group of promising young experimenters and several outstanding senior scholars in experimental and theoretical high energy physics in order to learn about the latest developments in the field and to strengthen contacts among scientists from different countries and different backgrounds The institute was both a great scientific and a great social success much of this was due to the beautiful setting and to the dedication of the Hotel management of Ray Boudreau and Hurchell Greenaway and their excellent staff The primary support for the meeting was once again provided by the Scientific Affairs Division of NATO The ASI was cosponsored by the U S Department of Energy by Fermilab by the National Science Foundation and by the University of Rochester A special contribution from the Oliver S and Jennie R Donaldson Charitable Trust provided an important degree of flexibility as well as support for worthy students from developing nations As in the case of the previous ASI s the scientific program was designed for advanced graduate students and recent PhD recipients in experimental particle physics

Experimental Techniques in High-energy Nuclear and Particle Physics Thomas Ferbel, 1991 Experimental Techniques in High Energy Nuclear and Particle Physics is a compilation of outstanding technical papers and reviews of the ingenious methods developed for experimentation in modern nuclear and particle physics This book a second edition provides a balanced view of the major tools and technical concepts currently in use and elucidates the basic principles that underly the detection devices Several of the articles in this volume have never been published or have appeared in relatively inaccessible journals Although the emphasis is on charged particle tracking and calorimetry general reviews of ionization detectors and Monte Carlo techniques are also included This book serves as a compact source of reference for graduate students and experimenters in the fields of nuclear and particle physics seeking information on some of the major ideas and techniques developed for modern experiments in these fields

Data Analysis Techniques for High-Energy Physics Rudolf Frühwirth, M. Regler, 2000-08-17 Now thoroughly revised and up dated this book describes techniques for handling and analysing data obtained from high energy and nuclear physics experiments The observation of particle interactions involves the analysis of large and complex data samples Beginning with a chapter on real time data triggering and filtering the book describes methods of selecting the relevant events from a sometimes huge background The use of pattern recognition techniques to group the huge number of measurements into physically meaningful objects like particle tracks or showers is then examined and the track and vertex fitting methods necessary to extract the maximum amount of information from the available measurements are explained The final chapter describes tools and methods which are useful to the experimenter in the physical interpretation and in the presentation of

the results This indispensable guide will appeal to graduate students researchers and computer and electronic engineers involved with experimental physics

Calorimetry In High Energy Physics: Proceedings Of The 8th International Conference Gaspar Barreira,Agostinho Gomes,Amelia Maio,Bernardo Tome,Maria J Varanda,2000-05-31 The International Conference on Calorimetry in High Energy Physics has become the major forum for presenting the latest developments of calorimetry techniques The eighth conference was attended by about 130 physicists from 20 countries and covered all aspects of calorimetric particle detection and measurements with emphasis on high energy physics experiments
