ability to effectively address a wide range of biomedical engineering physical science and related obstacles an achievement made possible by NASA's strong and productive commitments to life and physical sciences research for human space exploration and by its use of human space exploration infrastructures for scientific discovery The Committee for the Decadal Survey of Biological and Physical Sciences acknowledges the many achievements of NASA which are all the more remarkable given budgetary challenges and changing directions within the agency In the past decade however a consequence of those challenges has been a life and physical sciences research program that was dramatically reduced in both scale and scope with the result that the agency is poorly positioned to take full advantage of the scientific opportunities offered by the now fully equipped and staffed ISS laboratory or to effectively pursue the scientific research needed to support the development of advanced human exploration capabilities Although its review has left it deeply concerned about the current state of NASA's life and physical sciences research the Committee for the Decadal Survey on Biological and Physical Sciences in Space is nevertheless convinced that a focused science and engineering program can achieve successes that will bring the space community the U S public and policymakers to an understanding that we are ready for the next significant phase of human space exploration The goal of this report is to lay out steps and develop a forward looking portfolio of research that will provide the basis for recapturing the excitement and value of human spaceflight thereby enabling the U S space program to deliver on new exploration initiatives that serve the nation excite the public and place the United States again at the forefront of space exploration for the global good

Societal Impact of Spaceflight Steven J. Dick, Roger D. Launius, 2007

Since the dawn of spaceflight advocates of a robust space effort have argued that human activity beyond Earth makes a significant difference in everyday life Assertions abound about the impact of spaceflight on society and its relationship to the larger contours of human existence Fifty years after the Space Age began it is time to examine the effects of spaceflight on society in a historically rigorous way Has the Space Age indeed had a significant effect on society If so what are those influences What do we mean by an impact on society And what parts of society Conversely has society had any effect on spaceflight What would be different had there been no Space Age The purpose of this volume is to examine these and related questions through scholarly research making use especially of the tools of the historian and the broader social sciences and humanities Herein a stellar array of scholars does just that and arrives at sometimes surprising conclusions
