

GUIDANCE, NAVIGATION, AND CONTROL

GUIDANCE

Aiming a spacecraft by controlling the direction of its rocket thrust at launch or any other time the rocket changes speed or direction.

NAVIGATION

Getting from one place to another while in space. This often involves long periods of coasting and short bursts from small rockets to change course.

Uncorrected course

CONTROL

Orienting a spacecraft in its three axes of rotation (changing the direction it 'faces'). This may be done to aim an antenna, correct course, or dock with another craft.

Spacecraft Navigation And Guidance:

Spacecraft Navigation and Guidance Maxwell Noton, 2012-12-06 The analysis and computational techniques associated with the navigation and guidance of spacecraft are now in a mature state of development. However, the documentation has remained dispersed throughout conference papers, journals, company and contract reports, making it difficult to get a true comprehensive picture of the subject. This text brings together the body of literature with suitable attention to the necessary underlying mathematics and computational techniques. It covers in detail the necessary orbital mechanics, orbit determination with emphasis on the SRIF algorithm, gravity assist manoeuvres and guidance both ground based and autonomous. Attention is paid to all phases of a space mission including launch and re entry and whether culminating in an earth satellite or a deep space mission to planets or primitive bodies. Software associated with the text is available free to the reader by means of the Internet server of the publisher. Spacecraft Navigation and Guidance is an invaluable aid for all those working within astronautics, aeronautics and control engineering in general. *Fundamentals of Aerospace Navigation and Guidance* Pierre T. Kabamba, Anouck R. Girard, 2014-08-29 This text covers fundamentals used in the navigation and guidance of modern aerospace vehicles in both atmospheric and space flight. It can be used as a textbook supporting a graduate level course on aerospace navigation and guidance, a guide for self study or a resource for practicing engineers and researchers. It begins with an introduction that discusses why navigation and guidance ought to be considered together and delineates the class of systems of interest in navigation and guidance. The book then presents the necessary fundamentals in deterministic and stochastic systems theory and applies them to navigation. Next, the book treats optimization and optimal control for application in optimal guidance. In the final chapter, the book introduces problems where two competing controls exercise authority over a system leading to differential games. *Fundamentals of Aerospace Navigation and Guidance* features examples illustrating concepts and homework problems at the end of all chapters. *Control, Guidance and Navigation of Spacecraft* NASA-University Conference on the Science and Technology of Space Exploration, Chicago, 1962, 1986 Modern Spacecraft Guidance, Navigation, and Control Vincenzo Pesce, Andrea Colagrossi, Stefano Silvestrini, 2022-11-13 *Modern Spacecraft Guidance, Navigation, and Control: From System Modeling to AI and Innovative Applications* provides a comprehensive foundation of theory and applications of spacecraft GNC from fundamentals to advanced concepts including modern AI based architectures with focus on hardware and software practical applications. Divided into four parts, this book begins with an introduction to spacecraft GNC before discussing the basic tools for GNC applications. These include an overview of the main reference systems and planetary models, a description of the space environment, an introduction to orbital and attitude dynamics, and a survey on spacecraft sensors and actuators with details of their modeling principles. Part 2 covers guidance, navigation and control including both on board and ground based methods. It also discusses classical and novel control techniques, failure detection, isolation and recovery, FDIR methodologies, GNC verification, validation and on

board implementation The final part 3 discusses AI and modern applications featuring different applicative scenarios with particular attention on artificial intelligence and the possible benefits when applied to spacecraft GNC In this part GNC for small satellites and CubeSats is also discussed Modern Spacecraft Guidance Navigation and Control From System Modeling to AI and Innovative Applications is a valuable resource for aerospace engineers GNC AOCS engineers avionic developers and AIV AIT technicians Provides an overview of classical and modern GNC techniques covering practical system modeling aspects and applicative cases Presents the most important artificial intelligence algorithms applied to present and future spacecraft GNC Describes classical and advanced techniques for GNC hardware and software verification and validation and GNC failure detection isolation and recovery FDIR
