Spacecraft Over Earth:

Low Earth Orbit Satellite Design George Sebestyen, Steve Fujikawa, Nicholas Galassi, Alex Chuchra, 2018-02-06 In recent decades the number of satellites being built and launched into Earth's orbit has grown immensely alongside the field of space engineering itself. This book offers an in-depth guide to engineers and professionals seeking to understand the technologies behind Low Earth Orbit satellites. With access to special spreadsheets that provide the key equations and relationships needed for mastering spacecraft design, this book gives the growing crop of space engineers and professionals the tools and resources they need to prepare their own LEO satellite designs, which is especially useful for designers of small satellites such as those launched by universities. Each chapter breaks down the various mathematics and principles underlying current spacecraft software and hardware designs.

Advanced Space System Concepts and Technologies, 2010-2030+ Ivan Bekey, 2003 Bekey presents an imaginative view of what space could be like in the next several decades if new technologies are developed and bold new innovative applications are undertaken. He discusses a future environment for space activities very different from the predominant conditions of the past and present.

Space Carole Stott, 2010-10-04 Although a mere speck in the vast cosmos, humans have managed to piece together an incredible understanding of the Universe. Discover its magic and unravel its mysteries with this book. Starting from a launchpad on Earth, set off on an enthralling journey to the Solar System, the Milky Way, and finally to the very edges of the known Universe. **Space From Earth to the Edge of the Universe** features fascinating facts, an engaging narrative, and rich photographs that help you comprehend the vastness of this world that we exist in. The book has been divided into seven chapters covering intriguing concepts such as spacewalking, getting close to the Sun, and the Planetary Nebulae. Discover the technology and spacecrafts behind the extraordinary journeys undertaken by astronauts, study the planets, asteroids, and galaxies, and immerse yourself in the important space discoveries of our time. Featuring the latest spectacular images from NASA and other sources, **Space** will take you on the expedition of a lifetime.

Space on Earth C. Cockell, 2017-12-09 Sir Arthur Clarke Award Winner. Many environmentalists think going into space detracts from solving problems on Earth. Most space explorers feel environmentalism hampers their exploration of space. Leading astrobiologist Prof. Cockell argues that environmentalism and space exploration have one and the same objective: to ensure humanity has a home.

Fundamentals of Space Systems Vincent L. Pisacane, 2005
 Fundamentals of Space Systems was developed to satisfy two objectives: the first is to provide a text suitable for use in an advanced undergraduate or beginning graduate course in both space systems engineering and space system design. The second is to be a primer and reference book for space professionals wishing to broaden their capabilities to develop, manage, the development or operate space systems. The authors of the individual chapters are practicing engineers that have had extensive experience in developing sophisticated experimental and operational spacecraft systems in addition to having experience teaching the subject material. The text presents the fundamentals of all the subsystems of a spacecraft mission and includes illustrative examples drawn from actual experience to enhance the learning experience. It included a chapter on each of the relevant major disciplines and subsystems including space systems engineering, space environment, astrodynamics, propulsion and flight mechanics, attitude determination and control, power systems, thermal control, configuration management and structures, communications, command and telemetry, data processing, embedded flight software, survivability and reliability, integration and test, mission operations and the initial conceptual design of a typical small spacecraft mission.

Microengineering Technology for Space Systems Henry Helvajian, 1997
 A follow on to Micro and Nanotechnology for Space Systems, this second monograph in the series uses the more universal term microengineering to define the discipline and processes that lead to the development of an integrated and intelligent microinstrument. Microengineering Technology for Space Systems addresses specific issues concerning areas for ASIM application in current space systems operation in the space environment: ultra high density packaging and non-silicon materials, processing tools and the feasibility of the nanosatellite concept.
