Matzner, 2010-06-22 Observational and experimental data pertaining to gravity and cosmology are changing our view of the
Universe General relativity is a fundamental key for the understanding of these observations and its theory is undergoing a
continuing enhancement of its intersection with observational and experimental data These data include direct observations
and experiments carried out in our solar system among which there are direct gravitational wave astronomy frame dragging
and tests of gravitational theories from solar system and spacecraft observations This book explores John Archibald Wheeler's
seminal and enduring contributions in relativistic astrophysics and includes the General Theory of Relativity and Wheeler's
influence recent developments in the confrontation of relativity with experiments the theory describing gravitational
radiation and its detection in Earth based and space based interferometer detectors as well as in Earth based bar detectors
the mathematical description of the initial value problem in relativity and applications to modeling gravitational wave sources

Selected Papers, Volume 6 Subrahmanyan Chandrasekhar, 1991-04-09 This is the first of six volumes collecting significant papers of the distinguished astrophysicist and Nobel laureate S Chandrasekhar His work is notable for its breadth as well as for its brilliance his practice has been to change his focus from time to time to pursue new areas of research The result has been a prolific career full of discoveries and insights some of which are only now being fully appreciated Chandrasekhar has selected papers that trace the development of his ideas and that present aspects of his work not fully covered in the books he has periodically published to summarize his research in each area **Numerical Analysis 1997**

D.F. Griffiths, G.A. Watson, D J Higham, 1997-12-05 This book forms a valuable guide to the direction in which current numerical analysis research is heading It will be of particular interest to graduate students and researchers concerned with the theoretical and practical issues associated with scientific computation The main topics include ordinary and partial differential equations fluid flow optimization linear algebra and approximation theory Two recurring themes are the need for adaptive and structure preserving numerical methods The work presented here has a list of direct applications that include colliding black holes molecular dynamics blow up problems and card shuffling
