Abstract

Economics is a subject offered at the Further Education and Training (FET) section in South Africa, the subject has recorded performance that is not impressive, and the low enrolment and statistics of pass rate are of major concern. Therefore this paper explores the teachers' content knowledge and strategies used to teach Economics in some selected schools in South Africa. The paper adopts a qualitative approach to phenomenological research design. Purposive sampling techniques were used to select 12 teachers from six schools, two teachers from each school in Buffalo City Municipality in East London, South Africa. A semi-structured interview was used to elicit information from the respondents. The findings among others revealed that Economics is very useful to be a better citizen and to make rational life decisions, the use of the right pedagogy can improve performance, and the content knowledge with adequate on-the-job training will be a match in delivering the content of the subject. It is concluded that a low level of understanding of the basic Economics concepts could be attributed, to less professional development training of Economics teachers in content knowledge and pedagogy. It is recommended among others that the Economics teacher have to strike a balance between theory and practice. Teachers should be innovative and improvise by using technological skills, they should move towards the use of technology as a tool to enable learners to become creative, empathetic and high-order thinkers in this digital world.

1. Introduction

In post-apartheid South Africa, the government and education officials attempted to address and redress the educational inequalities of the past education system. However, to date education system in South Africa remains a challenging and argumentative subject to many. Amnesty International South Africa (2020) revealed that the South African education system, is marked by disintegrating infrastructure, overloaded classrooms, and relatively poor educational outcomes and this perpetuates inequality and thus fails many of its children (learners). Early in 2021, in a press release, Amnesty International announced that the COVID-19 pandemic has plunged South Africa into further crisis, exposing the country's education system continues to be shaped by the apartheid legacy declaring that "a child's experience of education in South Africa is still dependent on where they are born how wealthy they are, and the colour of their skin".

The fact of the matter is that the world we are living in is exposed to multifarious economic challenges. Teaching Economics in South Africa is a viable solution to addressing these challenges. Because Economics aims at educating people (learners) on how to competently and efficiently utilize scarce public and private resources to satisfy their needs. Apart from this fact, it has to teach our learners how to manage their monies and resources, (Ojo & Jeannin, 2016). In this regard, van Wyk (2015) insists that teaching economics in schools should create responsible citizens and effective decision-makers. However, it is an important subject that many of our nation's schools tend to overlook, (Vandeyar & Swart, 2015). The importance of Economics in education goes far beyond the goal of improving an understanding of the basic principles of supply and demand, and how the economy works, (van Wyk, 2015), creating responsible citizens who will become effective decision-makers. This emphasizes the prominence of Economics pedagogy in teaching and learning Economics in schools on improving an understanding of Economics in schools and also how can new knowledge be generated to expose learners to real-life learning environments and experiences.

Teaching Economics Ronald A. Banaszak, Dennis C. Brennan, 1983 Teaching Economics in the Primary Grades Yana Rodgers, Shelby Hawthorne, Ronald C. Wheeler, 2004 Primary grade students can gain exposure to the full range of economic concepts in state standards if teachers use reading based strategies that embrace children's literature with economic content This approach allows teachers to simultaneously teach their students to read and to understand economics Our state by state survey indicates that almost all states have content standards in economics beginning with kindergarten However only six states have standards that earn an A in our State Grade for Completeness In evaluating reading based strategies to teach these standards we identify more than two hundred picture books and easy readers that focus on economics Despite the appeal of teaching economics through literature there is not enough assessment of reading based strategies and new assessments should be attempted in the early grades
