Learning to Teach Mathematics in the Secondary School Sue Johnston-Wilder, Clare Lee, David Pimm, 2016-09-13

Learning to Teach Mathematics in the Secondary School combines theory and practice to present a broad introduction to the opportunities and challenges of teaching mathematics in the secondary school classroom. This fourth edition has been fully updated to reflect the latest changes to the curriculum and research in the field, taking into account key developments in teacher training and education, including examinations and assessment. Written specifically with the new and student teacher in mind, the book covers a wide range of issues related to the teaching of mathematics, such as why we teach mathematics, the place of mathematics in the National Curriculum, planning teaching and assessing for mathematics learning, how to communicate mathematically, using digital technology to advance mathematical learning, working with students with special educational needs, post-16 teaching, the importance of professional development, the affective dimension when learning mathematics, including motivation, confidence, and resilience. Already a major text for many university teaching courses, this revised edition features a glossary of useful terms and carefully designed tasks to prompt critical reflection and support thinking and writing up to Masters Level. Issues of professional development are also examined, as well as a range of teaching approaches and styles, from whole class strategies to personalised learning, helping you to make the most of school experience during your training and beyond. Designed for use as a core textbook, *Learning to Teach Mathematics in the Secondary School* provides essential guidance and advice for all those who aspire to be effective mathematics teachers.

Teaching Mathematics in Secondary Schools Linda Haggarty, 2013-09-13. A companion to *Aspects of Teaching Secondary Mathematics*, this book introduces and explores the contemporary issues and key ideas entailed in the teaching and learning of this subject. This book is concerned with exploring the bigger picture of mathematics education and is aimed particularly at those learning to teach mathematics teachers in the classroom who want to continue thinking and developing as mathematics teachers, and those concerned with education who would like to be better informed about mathematics education. Divided into seven sections to help structure reading, this book offers a completely up-to-date comprehensive overview, written by the most known well-respected experts in the field. **Learning to Teach Mathematics in the Secondary School** Sue

Johnston-Wilder, Peter Johnston-Wilder, David Pimm, 2005-01-14. *Learning to Teach Mathematics in the Secondary School* covers a wide range of issues in the teaching of mathematics and gives supporting activities to students to enable them to translate theory into practice. Topics covered include mathematics in the National Curriculum, different teaching approaches, using ICT, mathematics education for pupils with special needs, in mathematics assessment and public examinations, teaching mathematics post-16, professional development. **Teaching Mathematics** Michelle Selinger, 2013-10-31. In this reader,

maths teachers in the early years of their careers will find a concise yet comprehensive guide to developments in mathematics teaching in secondary schools and the controversies which currently surround it. After a brief summary of the

historical context a series of short articles provides a range of perspectives on various issues of current debate which will help new teachers in the development of their own teaching styles These include the impact of computers and calculators in maths teaching the various arguments about the use of published schemes and for more investigational approaches to the curriculum and the way in which social and cultural factors can be approached through the teaching of various topics in mathematics The final section looks at how teachers might continue their professional development through action research in their own classrooms

Chernoff, 2018-10-24 This volume brings together recent research and commentary in secondary school mathematics from a breadth of contemporary Canadian and International researchers and educators It is both representative of mathematics education generally as well as unique to the particular geography and culture of Canada The chapters address topics of broad applicability such as technology in learning mathematics recent interest in social justice contexts in the learning of mathematics as well as Indigenous education The voices of classroom practitioners the group ultimately responsible for implementing this new vision of mathematics teaching and learning are not forgotten Each section includes a chapter written by a classroom teacher making this volume unique in its approach We have much to learn from one another and this volume takes the stance that the development of a united vision supported by both research and professional dialog provides the first step

The Teaching of Mathematics in Secondary Schools Arthur Schultze, 2015-06-14 Excerpt from The Teaching of Mathematics in Secondary Schools Since 1906 the author has delivered a yearly course of lectures at New York University on the Teaching of Mathematics in Secondary Schools These lectures consisted largely of a concrete discussion of the problems that arise in actual teaching This book was planned on similar lines but the pressure of professional duties coupled with ill health made it impossible to carry out this concrete treatment of the subject through the entire extent of secondary school work The author hopes however that all important and fundamental topics have been treated in such detail as to be of real assistance to the inexperienced teacher to whom the generalities of abstract pedagogy are not only useless but often meaningless The chief object of this book is to contribute towards making mathematical teaching less informational and more disciplinary Most teachers admit that mathematical instruction derives its importance from the mental training that it affords and not from the information that it imparts But in spite of these theoretical views a great deal of mathematical teaching is

Teaching Mathematical Reasoning in Secondary School Classrooms Karin Brodie, 2009-10-08 For too many students mathematics consists of facts in a vacuum to be memorized because the instructor says so and to be forgotten when the course of study is completed In this all too common scenario young learners often miss the chance to develop skills specifically reasoning skills that can serve them for a lifetime The elegant pages of Teaching Mathematical Reasoning in Secondary School Classrooms propose a more positive solution by presenting a reasoning and discussion based approach to teaching mathematics emphasizing the connections between ideas or why math works The teachers whose work forms the basis of the book create a powerful record of methods interactions and decisions including dealing with challenges and impasses involving this elusive topic And because this approach shifts the locus of authority from the instructor to mathematics itself students gain a system of knowledge that they can apply not only to discrete tasks relating to numbers but also to the larger world of people and the humanities A sampling of the topics covered Whole class discussion methods for teaching mathematics reasoning Learning mathematical reasoning through tasks Teaching mathematics using the five strands Classroom strategies for promoting mathematical reasoning Maximizing student contributions in the classroom Overcoming student resistance to mathematical conversations Teaching Mathematical Reasoning in Secondary School Classrooms makes a wealth of cutting edge strategies available to mathematics teachers and teacher educators This book is an invaluable resource for researchers in mathematics and curriculum reform and of great interest to teacher educators and

teachers
