Technological Decisions And Democracy:

Scientific Controversies H. Tristram Engelhardt, Jr., Arthur L. Caplan, 1987-04-24 This collection of essays examines the ways in which disputes and controversies about the application of scientific knowledge are resolved Four concrete examples of public controversy are considered in detail the efficacy of Laetrile the classification of homosexuality as a disease the setting of safety standards in the workplace and the utility of nuclear energy as a source of power The essays in this volume show that debates about these cases are not confined to matters of empirical fact Rather as is seen with most scientific and technical controversies they focus on and are structured by complex ethical economic and political interests Drs Engelhardt and Caplan have brought together a distinguished group of scholars from the sciences and humanities who sketch a theory of scientific controversy and attempt to provide recommendations about the ways in which both scientists and the public ought to seek more informed resolutions of highly contentious issues in science and technology *Scientific Controversies* is offered as a contribution to the better understanding of the roles of both science and nonscientific interests in disputes and controversies pertaining to science and technology

Technological Choices Pierre Lemonnier,2013-10-15 Technological Choices applies the critical tools of archaeology to the subject of technology and its impact on humankind throughout the ages An examination of the challenges technological innovations present to various cultures Technological Choices asserts that in any society such choices are made on the basis of cultural values and social relations rather than on the inherent benefits in technology itself Of course this revolutionary viewpoint has critical implications for contemporary Western societies Based on case studies covering a wide range of chronologies and geographies Technological Choices moves rapidly from Neolithic Europe to the modern industrial age stopping on the way to examine the tribes of Papua New Guinea rural Indian and North African societies as well as several European peasant communities The techniques studied range from the manufacture of stone implements to the development of high tech transportation devices With its breadth of subject matter and multidisciplinary approach Technological Choices offers new insight into the interrelationship between technology and society Also unprecedented is the book s emphasis on the functional aspects of material culture *Environmental Impact Assessment, Technology Assessment, and Risk Analysis* Vincent T. Scientists is the premier public resource on scientific and technological developments that impact global security Founded by Manhattan Project Scientists the Bulletin s iconic Doomsday Clock stimulates solutions for a safer world Democratizing Technology Tyler J. Veak,2012-02-01 Largely because of the Internet and the new economy technology has become the buzzword of our culture But what is it and how does it affect our lives More importantly can we control and shape it or does it control us In short can we make technology more democratic Using the work of Andrew Feenberg one of the most important and original figures in the field of philosophy of technology as a foundation the contributors to this volume explore these important questions and Feenberg responds In the 1990s Feenberg authored three books that established him as one of the leading scholars in a rapidly developing field and he is one of the few to delineate a theory for democratizing technological design He has demonstrated the shortcomings of traditional theories of technology and argued for what he calls democratic rationalization where actors intervene in the technological design process to shape it toward their own ends In this book the contributors analyze foundational issues in Feenberg s work including questions of human nature biotechnology gender and his readings of Heidegger and they also examine practical issues including democratizing technology moral evaluation and environmentalism **Readings in the Philosophy of Technology** David M. Kaplan,2004 Readings in the Philosophy of Technology is a collection of the important works of both the forerunners of philosophy of technology and contemporary theorists addressing a full range of topics on technology as it relates to ethics politics human nature computers science and the environment **Public Administration and Information Technology** Christopher Reddick,2011-09-16 Public Administration and Information Technology provides students and professionals with a solid foundation for understanding and managing information systems to create more efficient effective and transparent organizations Back cover *Why Democracies Need Science* Harry Collins,Robert Evans,2017-03-27 We live in times of increasing public distrust of the main institutions of modern society Experts including scientists are suspected of working to hidden agendas or serving vested interests The solution is usually seen as more public scrutiny and more control by democratic institutions experts must be subservient to social and political life In this book Harry Collins and Robert Evans take a radically different view They argue that rather than democracies needing to be protected from science democratic societies need to learn how to value science in this new age of uncertainty By emphasizing that science is a moral enterprise guided by values that should matter to all they show how science can support democracy without destroying it and propose a new institution The Owls that can mediate between science and society and improve technological decision making for the benefit of all *Encyclopedia of Science and Technology Communication* Susanna Hornig Priest,2010-07-14 The explosion of scientific information is exacerbating the information gap between richer poorer educated less educated publics The proliferation of media technology and the popularity of the Internet help some keep up with these developments but also make it more likely others fall further behind This is taking place in a globalizing economy and society that further

complicates the division between information haves and have nots and compounds the challenge of communicating about emerging science and technology to increasingly diverse audiences Journalism about science and technology must fill this gap yet journalists and journalism students themselves struggle to keep abreast of contemporary scientific developments Scientist aided by public relations and public information professionals must get their stories out not only to other scientists but also to broader public audiences Funding agencies increasingly expect their grantees to engage in outreach and education and such activity can be seen as both a survival strategy and an ethical imperative for taxpayer supported university based research Science communication often in new forms must expand to meet all these needs Providing a comprehensive introduction to students professionals and scholars in this area is a unique challenge because practitioners in these fields must grasp both the principles of science and the principles of science communication while understanding the social contexts of each For this reason science journalism and science communication are often addressed only in advanced undergraduate or graduate specialty courses rather than covered exhaustively in lower division courses Even so those entering the field rarely will have a comprehensive background in both science and communication studies This circumstance underscores the importance of compiling useful reference materials The Encyclopedia of Science and Technology Communication presents resources and strategies for science communicators including theoretical material and background on recent controversies and key institutional actors and sources Science communicators need to understand more than how to interpret scientific facts and conclusions they need to understand basic elements of the politics sociology and philosophy of science as well as relevant media and communication theory principles of risk communication new trends and how to evaluate the effectiveness of science communication programmes to mention just a few of the major challenges This work will help to develop and enhance such understanding as it addresses these challenges and more Topics covered include advocacy policy and research organizations environmental and health communication philosophy of science media theory and science communication informal science education science journalism as a profession risk communication theory public understanding of science pseudo science in the news special problems in reporting science and technology science communication ethics

Capitalist Artificial Intelligence, Challenges for the Left and Possible Alternatives: Technology in the Service of Capital or a Tool for Liberation? Rezgar Akrawi, Why This Book And Why Now With the rapid developments in artificial intelligence and its growing influence on various aspects of life it has become essential to provide a comprehensive leftist analysis of this key topic AI has become a cornerstone in reshaping labor relations production patterns and managing public consciousness surpassing traditional capitalist tools The absence of a socialist analysis of AI allows capitalist elites to direct the discourse to serve their class interests Therefore we need an analysis that explains how AI is used not only as a tool for production but also as a means to control labor consciousness and restructure markets Why a Leftist Perspective on AI This book aims to provide an initial leftist critique of AI exposing its connection to capital domination and exploring its

potential as a tool for liberation within a socialist framework It is not only theoretical but an attempt to spark a leftist debate on how to reclaim technology from corporations and major states to serve social justice equality and democracy AI is not a threat by itself it is a battleground where the class struggle is fought The digital revolution is reshaping control over knowledge making it a critical arena for class struggle Technology is not neutral and the challenge is to ensure it serves the masses not deepen capitalist control What Does This Book Offer This book presents a critical vision of AI from a Electronic left perspective based on the principles of electronic leftism It seeks to reclaim technology and redirect AI towards serving society with a focus on building leftist digital internationals The solution is to develop open source transparent systems managed democratically and push for international laws that regulate AI to serve the public good not capitalist interests The real solution is to build progressive alternatives with community ownership using AI to dismantle exploitation and create a more just society The development of leftist capacities in the technical field has become a strategic necessity parallel to the development of capacities in the political intellectual organizational media and grassroots fields Just as the left cannot rely on capitalist media and seeks to build its own independent media and as it develops its thought politics and organizational tools independently free from the frameworks of capitalist domination it must also work on building its own independent technological alternatives with AI at the forefront to serve its comprehensive liberation project Razgar Akrawi Independent Leftist Interested in Leftism and Technological Revolution **Citizenship and Participation in the Information Age** Manjunath Pendakur, Roma M. Harris, 2002-01-01 This book reflects each contributor's vision of the future visions that range from the enthusiastic and hopeful to the pessimistic and fearful
