

Microphotography

- Microphotography, also known as micrography, is a technique that involves capturing highly magnified images of small objects or details using specialized equipment, such as microscopes or macro lenses. Unlike photomicrography, which focuses on microscopic subjects, microphotography can include a broader range of subjects that are smaller than what can be easily captured with standard photography techniques.

Light microscopic techniques in biology and medicine J. James, 2012-12-06 Up to about twenty five years ago virtually the entire field of microscopy could be overseen and even practiced by any active research worker. The rapid evolution which microscopy in its broadest sense has since undergone and which has contributed greatly to our insight in many fields of biological science and medicine has however led to a progressive specialisation. Both experienced investigators in clinical and biological laboratories and post graduate students confronted with a limited number of microscopic techniques in their daily research work have increasing difficulty in keeping or obtaining a general idea of the many time honoured and new possibilities which microscopy has to offer. This book has been written with the aim of presenting general information on light microscopic techniques at a level somewhere in between booklets like those provided by microscope manufacturers which are often too much focussed on the production program of a particular make and very advanced treatises with a thorough mathematical treatment of all phenomena concerned. The physically oriented texts moreover often do not sufficiently take into account the practical situation in a medical or biological laboratory. On the other hand the value of really understanding what one is doing in using a microscopic technique is often underestimated. An attempt has been made therefore to present sufficient background information necessary for a rational application of the different microscopical techniques in their mutual relationship.

Methods and Techniques in Plant Nematology N. G. Ravichandra, 2010-06 Examines a wide range of practical methods and techniques used in plant nematology. It has been designed to fulfil the needs of both undergraduate and postgraduate students of agriculture and horticulture. It includes both basic and applied aspects of plant nematology.

Neuroanatomical Research Techniques Richard T. Robertson, 2013-10-22 Neuroanatomical Research Techniques discusses developments in major neuroanatomical research techniques. The book is organized into four parts. Part I deals generally with the preparation and study of brain tissue. It includes a chapter on the microscope discussing optical magnification limitations of microscopy and optical contrasting methods. Other chapters summarize basic techniques for tissue preparation and sectioning, present guidelines for a number of standard but essential staining procedures and present sophisticated and contemporary computer techniques that are proving to be invaluable as neuroanatomy evolves from a qualitative to a quantitative discipline. Part II deals with techniques often used for the study of normal tissue. These include the Golgi method, fluorescence histochemistry, techniques for staining single neurons and the use of the electron microscope. Part III presents techniques for studying intrinsic connections of the nervous system. These include techniques for silver impregnation of degenerating fibers, autoradiographic technique for studying axonal projections and somatopetal movement of horseradish peroxidase as a tool for studying connections and neuron morphology. Part IV discusses the interpretation of results from neuroanatomical research techniques and presents examples of the applications of neuroanatomical methods to
