Hughes, 1998 Edited and written by the engineers intimately involved in the project this text presents both theory and practice in site reclamation and provides valuable lessons in site investigation geotechnical instrumentation and more

Landslide Hazard and Risk Thomas Glade, Malcolm G. Anderson, Michael J. Crozier, 2006-01-04 With the increasing need to take an holistic view of landslide hazard and risk this book overviews the concept of risk research and addresses the sociological and psychological issues resulting from landslides Its integrated approach offers understanding and ability for concerned organisations landowners land managers insurance companies and researchers to develop risk management solutions Global case studies illustrate a variety of integrated approaches and a concluding section provides specifications and contexts for the next generation of process models **Slope Engineering in Hong Kong** K.K.S. HO, J.N. Kay, K.S.

Li, 1998-01-01 The rapid economic growth in recent years has resulted in increasing demand on Hong Kong's infrastructure and the use of steeply sloping sites with extensive cut and fill slopes for building development In the dense urban environment of Hong Kong pressure to maximize land use is intense The proceedings contain a keynote paper which describes the risk management of slopes of Hong Kong and an invited paper which presents the state of the art of slope design in Hong Kong The publication also contains papers with a wide range of topics including case studies slope hydrology design and analysis of slopes application of quantitative risk techniques in slope stability assessment and other special topics This will be a useful reference book for geotechnical engineers in Hong Kong and other parts of the world dealing with slopes in tropical soils and densely populated areas Canadian Geotechnical Journal National Research Council Canada, 2005

Unsaturated Soils José Fernando Thome Jucá, Tácio M. P. de Campos, Fernando A. M. Marinho, 2002 Unsaturated materials comprise residual collapsible and expansive naturally occurring soils compacted soils and more recently residues of solid wastes The engineering problems associated with unsaturated materials range from those related to conventional geotechnical works e.g. foundations pavements slopes and excavations retaining structures earthdams irrigation canals tunnelling compacted embankments to those included in the environmental area e.g. natural slope instability erosion and subsidence processes tailings residues or solid waste disposal contaminant transport remediation of contaminant sites engineered barriers for environmental protection re use of residues This book published in three separate volumes comprises a selection of selected and invited papers presented at the Third International Conference on Unsaturated Soils UNSAT 2002 that took place in Recife Brazil from 10th to 13th March 2002 The book is of interest to consultants researchers practitioners lecturers and students with a background in geotechnical engineering environmental engineering and engineering geology
