Biomimetic Robotic Artificial Muscles

Kwang Jin Kim, Hyouk Ryeol Choi, Xiaobo Tan, David Pugal, 2013-03-26 *Biomimetic Robotic Artificial Muscles* presents a comprehensive up to date overview of several types of electroactive materials with a view of using them as biomimetic artificial muscles. The purpose of the book is to provide a focused in depth yet self contained treatment of recent advances made in several promising EAP materials. In particular ionic polymer metal composites conjugated polymers and dielectric elastomers are considered. Manufacturing physical characterization modeling and control of the materials are presented. Namely the book adopts a systems perspective to integrate recent developments in material processing actuator design control oriented modeling and device and robotic applications. While the main focus is on the new developments in these subjects an effort has been made throughout the book to provide the reader with general basic information about the materials before going into more advanced topics. As a result the book is very much self contained and expected to be accessible for a reader who does not have background in EAPs. Based on the good fundamental knowledge and the versatility of the materials several promising biomimetic and robotic applications such as robotic fish propelled by an IPMC tail an IPMC energy harvester an IPMC based valveless pump a conjugated polymer petal driven micropump and a synthetic elastomer actuator enabled robotic finger are demonstrated.
