Smoke Exposure at Western Wildfires Timothy E. Reinhardt, 2000 *Smoke Exposure at Western Wildfires* Timothy E. Reinhardt, Roger D. Ottmar, 2000 Smoke exposure measurements among firefighters at wildfires showed that between 3 5% of the shift average exposures exceeded occupational exposure limits OEL for carbon monoxide CM respiratory irritants Among workers involved in direct attack of actively burning areas maintaining fireline boundaries peak exposure situations could be several times greater than recommended OEL for short term exposures Exposure to acrolein benzene formaldehyde respirable particulate matter could be predicted from measurements of carbon monoxide Electrochemical dosimeters for CM were the best tool for routinely assessing smoke exposure Tables *Smoke Exposure Among Wildland Firefighters* Timothy E. Reinhardt, 1997 **Modelling, Monitoring and Management of Forest Fires II** G. Perona, C. A. Brebbia, 2010 As in the past future forest fire scenarios are impacted by climatic trends and changes in climatic extremes as well as by anthropic pressure It is to be expected that future trends especially in the Mediterranean regions will certainly lead to an increasing impact of human pressure on the natural environment due to increases in tourism and to the enlargement of urban residential areas invading the countryside Forecasting the effects of both factors climatic and anthropic and separating their effects on forest fires frequencies may be particularly difficult but is essential to improve our knowledge of forest fire occurrence probability and to better organize prevention and fighting activities At the same time estimation of the possible increase of fire risk over coming years is important taking into account also the diverse fire prone environments present in the Mediterranean as well as many other areas mountain slopes coastal zones large islands etc This book contains peer reviewed papers presented at the Second International Conference on Modelling Monitoring and Management of Forest Fires held in Kos Greece in 2010 The papers covered important topics in the field of prevention and fighting of forest fires including Computational Methods and Experiments Air Quality and Health Risk Models Detection Monitoring and Response Systems Decision Support Systems Resource Optimization Risk Assessment and Vulnerability Assessment **General Technical Report PNW-GTR** , 1999 Wildland Fire in Ecosystems David V. Under Fire and Under Water Bruce E. Cain, 2023-11-14 Epic wildfire Devastating drought Cataclysmic flooding Extreme weather in the wake of climate change threatens to turn the American West into a region hostile to human habitation a Great American Desert as early US explorers once mislabeled it As Bruce E Cain suggests in this timely book the unique complex of politics technology and logistics that once won the West must be rethought and reconfigured to win it anew in the face of a widespread accelerating threat The challenges posed by increasingly extreme weather in the West are complicated by the region s history the deliberate fractiousness of the American political system and the idiosyncrasies of human behavior all of which Cain considers separately and together in *Under Fire and Under Water* He analyzes how in spite of coastal flooding and spreading wildfires people continue to move into and even rebuild in risky areas how local communities are slow to take protective measures and how individual beliefs past adaptation practices and infrastructure and complex governing arrangements across jurisdictions combine to flout real progress Driving Cain s analysis is the conviction that understanding the habits and politics that lead to procrastination and obstruction is critical to finding solutions and making necessary adaptations to the changing climate As a detailed look at the rising stakes and urgency of the various interconnected issues this book is an important first step toward that understanding and consequently toward the rethinking and reengineering that will allow people to live sustainably in the American West under the conditions of future global warming
