The Biologic Effects Of Ultraviolet Radiation With Emphasis On The Skin B:

UV-A John Parrish, 2012-12-06 The origin of this text was a request by industry and government to summarize the biological effects and to estimate the limits of safe exposure to longwave ultraviolet radiation. The specific issue was the safety of a small medium pressure mercury arc designed to emit UV A. NUVA Lite L D Caulk Co Milford Delaware for photopolymerization of resinous fillings used in dentistry. However the context grew to become a consideration of the risks and benefits to humans of electromagnetic radiation between the biologically active short UV and the visible spectrum. We have accumulated data from our own experimental work and from the literature and have attempted to put this information in the perspective of known biologic effects of ultraviolet radiation as it influences humans. Interest in the biological effects of longwave ultraviolet radiation is increasing in all of the many scientific disciplines that make up the complex field of photobiology. In order to minimize the chance for error and personal prejudice and to maximize the use of expertise each chapter has been reviewed by several authorities. Some of the contributions of this group led to significant alterations and creative additions to the chapter and these persons deserve not only our sincere gratitude but also recognition by the reader. These include Chapters 2 and 3 Dr Robert E Levin Mr Charles P Comeau Mr Donald Gonser Dr David Sliney Chapter 5 Dr Jerry Williams Dr Robert Webb Dr Madhu A

Pharmacology of the Skin II, 2012-12-06 The recent interest in the pharmacology of the skin and the treatment of its diseases has come about for two reasons. The first is a realisation that many aspects of pharmacology can be studied as easily in human skin as in animal models where they may be more relevant to human physiology and disease. Examples of this are the action of various vasoactive agents and the isolation of mediators of inflammation after UV irradiation and antigen induced dermatitis. The second reason is the fortuitous realisation that a pharmacological approach to the treatment of skin disease need not always await the full elucidation of aetiology and mechanism. For example whilst the argument continued unresolved as to whether the pilosebaceous infection which constitutes acne was due to a blocked duct or to a simple increase in sebum production 13-cis retinoic acid was found quite by chance totally to ablate the disease again whilst cyclosporin fresh from its triumphs in organ transplantation has been found able to suppress the rash of psoriasis it has resuscitated the debate on aetiology. We are therefore entering a new era in which the pharmacology and clinical pharmacology of skin are being studied as a fascinating new way of exploring questions of human physiology and pharmacology as well as for the development and study of new drugs use of which will improve disease control and at the same time help to define pathological mechanisms. *The Biologic Effects of Ultraviolet Radiation, with Emphasis on the Skin: Proceedings of the First International Conference... back thousands of years with even preliterate cultures appreciating the healing properties of sunlight for many workers in the discipline photomedicine is associated with the observation about 100 years ago of Niels Finsen a Danish physician Finsen recognized that people with tuberculosis who lived in Norway and who had very little exposure to sunlight often developed facial lesions lupus vulgaris which would decrease and sometimes disappear during the summer months This very observant physician reasoned that artificial light ought to produce the same effect as sunlight and began utilizing the radiation from the newly available carbon arc At first he used a glass lens to concentrate the radiation but since this produced considerable burning he replaced this with a hollow glass lens filled with water However while this reduced the heat burns it did not actually duplicate the effect of direct sunlight Finally using a hollow lens filled with water but equipped with quartz windows Finsen was able to imitate even improve upon the effect of sunlight As a result lupus vulgaris was practically eliminated from the Scandinavian countries The Biologic Effects of Ultraviolet Radiation Temple University. Handbook of Laboratory Health and Safety Measures S.B. Pal, 2013-03-14 During the past two decades many books governmental reports and regulations on safety measures against chemicals fire microbiological and radioactive hazards in laboratories have been published from various countries These topics have also been briefly discussed in books on laboratory planning and management The application of various scientific instruments based on different ionizing and non ionizing radiations have brought new safety problems to the laboratory workers of today irrespective of their scientific disciplines be they medicine natural or life sciences However no comprehensive laboratory handbook dealing with all these hazards some of which are recently introduced had so far been available in a single volume Therefore it was thought worthwhile to publish this Handbook on safety and health measures for laboratories with contributions from several experts on these subjects As this second edition of the Handbook like the first edition is a multi-author volume some duplication in content among chapters is unavoidable in order to maintain the context of a chapter as well as make each chapter complete An attempt has also been made to maintain the central theme which is how to work in a laboratory with maximum possible environmental safety

Protecting the Ozone Layer Philippe G. Le Prestre, John D. Reid, E. Thomas Morehouse Jr., 1998-09-30 Protecting the Ozone Layer Lessons Models and Prospects Since the mid 1980s the international community has adopted several significant instruments designed to reverse the degradation of the life support systems of the planet None of these international agreements have been as successful as the 1987 Montreal Protocol in creating the incentives and mechanisms for protecting the ozone layer Through the efforts of industry government and public interest groups national commitments and achievements have progressed further and faster than expected while the list of controlled chemicals has expanded Now in its second decade the Protocol enters a crucial phase of its implementation Protecting the Ozone Layer Lessons Models and Prospects presents a wealth of information about the scientific legal political and technological hurdles that we will have to overcome if humanity is to reverse its self destructive course The technology section in particular should appeal to industries affected by ozone layer protection as well as those affected by climate protection since this is the first ozone publication featuring insights by the companies that spearheaded the major technological breakthroughs Every initiative to improve the environmental performance of industry has been accompanied by pronouncements of economic devastation from acid rain to auto emissions standards from auto mileage improvements to the protection of the ozone layer Each new initiative brought claims from industry that this situation was different yet none of their predictions have come true At a time when industry fights efforts to protect the environment the ozone experience shows both how technical breakthroughs have enabled environmental protection policies to work in the past and how they will work again in the future Protecting the Ozone Layer Lessons Models and Prospects is the product of a Colloquium that was organized in September 1997 to

celebrate the tenth anniversary of the Montreal Protocol Contributions have been gathered from researchers and practitioners in the field including some of the very same scientists whose work awakened the international community to the seriousness of the danger that humanity now faces Other contributors include the scholars and diplomats who wrote and negotiated the text of the Protocol and its amendments and the key figures who have been influential in convincing industry to support the process Photodermatology Henry W.
