Stream Ecology J. David Allan, 2012-12-06 Running waters are enormously diverse ranging from torrential mountain brooks to large lowland rivers to great river systems whose basins occupy subcontinents While this diversity makes river ecosystems seem overwhelmingly complex a central theme of this volume is that the processes acting in running waters are general although the settings are often unique The past two decades have seen major advances in our knowledge of the ecology of streams and rivers New paradigms have emerged such as the river continuum and nutrient spiraling Community ecologists have made impressive advances in documenting the occurrence of species interactions The importance of physical processes in rivers has attracted increased attention particularly the areas of hydrology and geomorphology and the inter relationships between physical and biological factors have become better understood And as is true for every area of ecology during the closing years of the twentieth century it has become apparent that the study of streams and rivers cannot be carried out by excluding the role of human activities nor can we ignore the urgency of the need for conservation These developments are brought together in *Stream Ecology* Structure and function of running waters designed to serve as a text for advanced undergraduate and graduate students and as a reference book for specialists in stream ecology and related fields

Soil and Water Contamination Marcel van der Perk, 2017-10-09 Soil and Water Contamination Second Edition gives a structured overview of transport and fate processes of environmental contaminants Providing a structured overview of transport and fate processes of environmental contaminants this textbook approaches the environmental issues of soil and water contamination from a spatial and earth science point of view The new edition contains new material on pesticides and pharmaceutical contaminants and a greater number of exercises case studies and examples It covers topics essential to understanding and predicting contaminant patterns in soil groundwater and surface water and contributes to the formation of a solid basis for adequate management and control of soil and water pollution and integrated catchment

River Biota Peter P. Calow, 2009-07-08 As with all ecosystems river systems involve a complex interaction of a rich diversity of micro organisms plants and animals with their physical and chemical environment The river habitat presents unique problems for organisms exposed to unidirectional currents seasonal variation in flow and disturbance due to pollution and other human interference The book starts with a description of the taxa their adaptations and their ecologies followed by chapters describing the ecosystem processes in terms of trophic interactions and the key production processes related to photosynthesis and decomposition A major chapter then considers the principles practices and problems associated with making reliable observations on river organisms leading to final chapters investigating how

river biota are impacted by human activity and how in turn they can be used as indicators of these effects in river management programmes

Dynamic Aquaria Walter H. Adey, Karen Loveland, 2011-08-29 In its third edition this praised book demonstrates how the living systems modeling of aquatic ecosystems for ecological biological and physiological research and ecosystem restoration can produce answers to very complex ecological questions Dynamic Aquaria further offers an understanding developed in 25 years of living ecosystem modeling and discusses how this knowledge has produced methods of efficiently solving many environmental problems Public education through this methodology is the additional key to the broader ecosystem understanding necessary to allow human society to pass through the next evolutionary bottleneck of our species Living systems modeling as a wide spectrum educational tool can provide a primary vehicle for that essential step This third edition covers the many technological and biological developments in the eight plus years since the second edition providing updated technological advice and describing many new example aquarium environments Includes 16 page color insert with 57 color plates and 25% new photographs Offers 300 figures and 75 tables New chapter on Biogeography Over 50% new research in various chapters Significant updates in chapters include The understanding of coral reef function especially the relationship between photosynthesis and calcification The use of living system models to solve problems of biogeography and the geographic dispersal and interaction of species populations The development of new techniques for global scale restoration of water and atmosphere The development of new techniques for closed system sustainable aquaculture

Microplastics Pollution Control in Water Systems Javid Ahmad Parray, Aparna B. Gunjal, Nowsheen Shameem, A. K.

Haghi, 2024-12-29 This book covers advanced solutions for managing water systems pollution caused by microplastics. It provides a comprehensive overview of microplastic contamination spanning detection in municipal water systems, removal from wastewater using sustainable technologies, and monitoring methods in natural environments. The book also discusses the impacts of microplastics on water bodies and the limitations of current treatment processes, presenting complementary methods to address microplastic contamination. In this book, particular attention is given to practical insights into dealing with microplastic pollution, and readers will find several case studies such as the application of nonwoven electrospun nano membranes and activated carbon adsorbents for microplastics removal alongside novel laboratory experiments and field methods like the invertebrate kick netting technique. The book also offers a forward-looking approach discussing cutting-edge topics like the application of artificial intelligence for microplastic identification and the impact of land use patterns on soil microplastic pollution. The book concludes with a chapter devoted to smart management solutions, providing a glimpse into future trends and perspectives in the field. Given its breadth and coverage, the book appeals not only to academics and researchers in the fields of environmental chemistry and environmental sciences but also to professionals and policymakers dealing with microplastic pollution and research.

Agriculture and the Environment Noel D. Uri, 2006 Agriculture in the United States is in the midst of a major transition motivated by economic and environmental factors. These include water quality and quantity, soil erosion, and the compatibility of agricultural production practices and the quality of the environment. Within the context of this change, US agricultural policy seeks to balance several objectives, including an abundance of food and fibre at reasonable prices, economic security for agricultural producers, and conservation of natural resources. Agricultural chemical use and soil and water quality degradation associated with agricultural production are significant among the environmental problems confronting the United States. In fact, these are now perceived as environmental problems comparable to other environmental problems such as air quality deterioration and the release of toxic pollutants from industrial sources. While the growth of agricultural chemical use is an integral part of the technological revolution in agriculture that has generated major changes in production techniques, uncertainties about the health effects of agricultural chemicals are very important concerns. Severe soil degradation from erosion, compaction, or salinisation can destroy the productive capacity of the soil. It can also impair water quality from sediment and agricultural chemicals. This important new book looks at both of these significant issues: the relationship between agricultural chemical use and the environment and the relationship between soil and water quality degradation associated with agricultural production and the environment.

Sediments and Water Interactions Peter G. Sly, 2012-12-06 The first symposium on sediment freshwater interactions was held in Amsterdam in 1976 and the second was held at Kingston Ontario Canada in 1981 The third symposium was held at the University of Geneva in 1984 and also included a number of contributions dealing with sediment saltwater interactions It is expected that future symposia of this series will retain this approach and that the revised symposium title will remain the same for later proceedings of these meetings Because of the large number of submissions in 1984 many were given as poster presentations Extended abstracts of all contributions to the Geneva symposium appear in *Interactions Between Sediments and Water* C E P Consultants Ltd 26 Albany St Edinburgh EH1 3QH UK 1984 Full length papers appear only in the proceedings The format of the third symposium was similar to its predecessors The location provided a particularly good opportunity for attendance by European scientists who represented about 81% of the participants About 16% came from North America and 3% were from Southeast Asia and Australia It is unfortunate that there were no contributors from either Africa or South America or other parts of Asia In all 16 countries were represented at this symposium In a continuing attempt to provide equal opportunities for attendance by scientists from other parts of the world it is planned to hold the next symposium in Australia in 1987 Further information about the symposia series can be obtained from Dr E D

Virus Ecology and Disturbances: Impact of Environmental Disruption on the Viruses of Microorganisms Stephen Tobias Abedon, Heather K Allen, 2015-03-26 Viruses infect numerous microorganisms including predominantly Bacteria bacteriophages or phages but also Archaea Protists and Fungi They are the most abundant and ubiquitous biological entities on Earth and are important drivers of ecosystem functioning Little is known however about the vast majority of these viruses of microorganisms or VoMs Modern techniques such as metagenomics have enabled the discovery and description of more presumptive VoMs than ever before but also have exposed gaps in our understanding of VoM ecology Exploring the ecology of these viruses which is how they interact with host organisms the abiotic environment larger organisms and even other viruses across a variety of environments and conditions is the next frontier Integration of a growing molecular understanding of VoMs with ecological studies will expand our knowledge of ecosystem dynamics Ecology can be studied at multiple levels including individual organisms populations communities whole ecosystems and the entire biosphere Ecology additionally can consider normal equilibrium conditions or instead perturbations Perturbations are of particular interest because measuring the effect of disturbances on VoM associated communities provides important windows into how VoMs contribute to ecosystem dynamics These disturbances in turn can be studied through in vitro in vivo and in situ experimentation measuring responses by VoM associated communities to changes in nutrient availability stress physical disruption seasonality etc and could apply to studies at all ecological levels These are considered here across diverse

systems and environments
