Early Category and Concept Development David H. Rakison,Lisa M. Oakes,2008-12-30 Whether or not infants earliest perception of the world is a blooming buzzing confusion it is not long before they come to perceive structure and order among the objects and events around them At the core of this process and cognitive development in general is the ability to categorize to group events objects or properties together and to form mental representations or concepts that encapsulate the commonalities and structure of these categories Categorization is the primary means of coding experience underlying not only perceptual and reasoning processes but also inductive inference and language The aim of this book is to bring together the most recent findings and theories about the origins and early development of categorization and conceptual abilities

Despite recent advances in our understanding of this area a number of hotly debated issues remain at the center of the controversy over categorization Researchers continue to ask questions such as Which mechanisms for categorization are available at birth and which emerge later What are the relative roles of perceptual similarity and nonobservable properties in early classification What is the role of contextual variation in categorization by infants and children Do different experimental procedures reveal the same kind of knowledge Can computational models simulate infant and child categorization How do computational models inform behavioral research What is the impact of language on category development How does language partition the world This book is the first to address these and other key questions within a single volume The authors present a diverse set of views representing cutting edge empirical and theoretical advances in the field The result is a thorough review of empirical contributions to the literature and a wealth of fresh theoretical perspectives on early categorization

Westney,2011-06-22 Investors and managers of major projects know how often they result in cost overruns and schedule delays Risk Navigation Strategies for Major Capital Projects builds on conventional best practice to provide a risk based view of current practices for planning and executing large international projects As economies of scale continue to drive projects to ever higher levels of scope and complexity new thinking about strategy and risk is required Since major projects are highly exposed to external risks the traditional view of predictability as something that can be mandated and ensured by rigorous application of conventional best practice has become a myth Fresh thinking is required to manage projects today and this book provides a framework for taking project management best practice to the next level Risk Navigation Strategies for Major Capital Projects is intended for executives investing in major projects project leaders and managers as well as those with a teaching or research interest in project and risk management
