Warren,Peter Doudoroff,Oregon State College. Agricultural Experiment Station,1957 Water Quality Kudret Ertuð,Ilker Mirza,2010 Water quality is the physical chemical and biological characteristics of water It is most frequently used by reference to a set of standards against which compliance can be assessed The most common standards used to assess water quality relate to drinking water safety of human contact and for health of ecosystems The vast majority of surface water on the planet is neither potable nor toxic This remains true even if sea water in the oceans which is too salty to drink isn t counted Another general perception of water quality is that of a simple property that tells whether water is polluted or not In fact water quality is a very complex subject in part because water is a complex medium intrinsically tied to the ecology of the Earth Industrial pollution is a major cause of water pollution as well as runoff from agricultural areas urban stormwater runoff and discharge of treated and untreated sewage especially in developing countries This book gathers the latest research from around the globe in this field **U.S. Environmental Protection Agency Library System Book Catalog Holdings as of July 1973** United States.
