The Biology Of Epithelial Cell Populations

**D.S. Coffey, James P. Karr, R.G.
Smith, D.J. Tindall**

The Biology Of Epithelial Cell Populations:

The Biology of Epithelial Cell Populations Nicholas A. Wright, Malcolm Alison, 1984 This book brings together in a critical study current research on epithelial cell populations It sets out to analyse the principles by which epithelial cell populations are organized in terms of the function of their component populations The approach is both descriptive and operational giving special emphasis to epithelial cell lineages three dimensional organization methodology for measuring epithelial cell population sizes and proliferative rates epithelial stem cell populations growth reactions response to cytotoxic insult carcinogenesis and epithelial growth control The book is directed primarily at those who are interested in the organization of proliferating and differentiating tissue systems in terms of their contained cell lineages There are many lessons in epithelia for those studying growth control since they are in many situations ideal models upon which to test general ideas and concepts The authors also indicate the most important new research areas and provide advice on the practical approach to problems in epithelial cell proliferation and its control

The Biology of Epithelial Cell Populations Nicholas A. Wright, Malcolm Alison, 1984 National Cancer Institute Carcinogenesis Technical Report Series ,1976 In Vitro Carcinogenesis Umberto Saffiotti, Herman Autrup, 1978 **Molecular and Cellular Biology of Prostate Cancer** D.S. Coffey, James P. Karr, R.G. Smith, D.J. Tindall, 2012-12-06 These proceedings of the 5th Prouts Neck Meeting on Prostate Cancer held in October 1989 highlight the many advances in the understanding of prostatic growth and function at the cellular and molecular levels which have been registered since the first Prouts Neck Meeting in 1985 a meeting which also focused on the then current concepts and basic approaches to understanding prostate cancer Intervening Prouts Neck Meetings in 1986 1987 and 1988 were devoted to treatment image cytometry and clinical markers As before the Prouts Neck tradition of bringing together an international multidisciplinary group of experts for 3 days to exchange ideas and new data in the relaxed atmosphere of an old inn on the scenic Maine coast proved to be an ideal combination for a highly successful conference Accordingly the Organ System Program of the National Cancer Institute plans to use the Prouts Neck model for future conferences on other solid tumors bladder in 1990 and kidney in 1991 and will return to the prostate in 1992 A new dimension was added to the current program through the inclusion of a poster session to recognize the research of pre and postdoctoral investigators The posters were judged by Drs Collette Freeman Frank French Shutsung Liao Robert Matusik and Henry Sun The three winners in alphabetical order were John Fabian Robert Getzenberg and Ming Fong Lin Alcohol and the Gastrointestinal Tract Victor R. Preedy, 2017-09-08 This book covers all aspects of gastrointestinal tract problems caused by alcohol misuse Opening chapters discuss epidemiology and the metabolism of alcohol and the liver's role in that process Alcohol and acetaldehyde dehydrogenases free radicals and endocrine changes are discussed in detail Recent advances in the pathophysiology of alcohol induced disorders are summarized and many chapters detail techniques such as permeability and protein synthesis Effects on specific organs including the salivary glands stomach pancreas and small

intestine are also discussed All contributors and both editors are internationally recognized experts in their fields Growth of the Gastrointestinal Tract Jean A. Morisset, Travis E. Solomon, 1990-12-13 This book provides an up to date summary of the large body of data regarding gastrointestinal hormones and growth factors involved in the development and maintenance of the architecture and physiological functions of the different organs of the digestive tract The regulation of growth and differentiation in the stomach small intestine colon and pancreas is reviewed by experts in developmental and adult physiology as well as in pathophysiology of diseases involving each organ The book provides essential reference material for gastroenterologists medical and university libraries and investigators and graduate students of gastrointestinal physiology
