Data Analysis in Acoustical Problems Claudio Guarnaccia,Lamberto Tronchin,Massimo Viscardi,2020-06-23 Modelling and simulation in acoustics is currently gaining importance In fact with the development and improvement of innovative computational techniques and with the growing need for predictive models an impressive boost has been observed in several research and application areas such as noise control indoor acoustics and industrial applications This led us to the proposal of a special issue about Modelling Simulation and Data Analysis in Acoustical Problems as we believe in the importance of these topics in modern acoustics studies In total 81 papers were submitted and 33 of them were published with an acceptance rate of 37.5% According to the number of papers submitted it can be affirmed that this is a trending topic in the scientific and academic community and this special issue will try to provide a future reference for the research that will be developed in coming years **Approximation Methods and Analytical Modeling Using Partial Differential Equations**

Tamara Fastovska, Yurii Kolomoitsev, Kateryna Buryachenko, Marina Chugunova,2025-03-28 Adequate mathematical modeling is the key to success for many real world projects in engineering medicine and other applied areas As soon as an appropriate mathematical model is developed it can be comprehensively analyzed by a broad spectrum of available mathematical methods For example compartmental models are widely used in mathematical epidemiology to describe the dynamics of infectious diseases and in mathematical models of population genetics While the existence of an optimal solution under certain condition can be often proved rigorously this does not always mean that such a solution is easy to implement in practice Finding a reasonable approximation can in itself be a challenging research problem This Research Topic is devoted to modeling analysis and approximation problems whose solutions exploit and explore the theory of partial differential equations It aims to highlight new analytical tools for use in the modeling of problems arising in applied sciences and practical areas Researchers are invited to submit articles that investigate the qualitative behavior of weak solutions removability conditions for singularities the dependence of the local asymptotic property of these solutions on initial and boundary data and also the existence of solutions Contributors are particularly encouraged to focus on anisotropic models analyzing the preconditions on the strength of the anisotropy and comparing the analytical estimates for the growth behavior of the solutions near the singularities with the observed growth in numerical simulations The qualitative analysis and

analytical results should be confirmed by the numerically observed solution behavior **Advances in Information and Communication** Kohei Arai,2025-03-04 This book comprises the proceedings of the Future of Information and Communication Conference FICC 2025 held on 28 29 April 2025 in Berlin Germany The conference brought together leading researchers industry experts and academics from across the globe to discuss the latest advancements challenges and opportunities in the rapidly evolving field of information and communication technologies The conference received an impressive 401 submissions of which 138 high quality papers were selected after a rigorous peer review process These contributions span a diverse range of topics including artificial intelligence cybersecurity data science networking human computer interaction and more FICC 2025 provided an engaging platform for collaboration and knowledge exchange highlighting state of the art research and practical solutions to global challenges This proceedings book serves as a valuable resource for researchers practitioners and innovators seeking insights into the future of information and communication technologies School Directory Santa Barbara County (Calif.).
