Brian Power-Waters XIII,2008-02 Captain Power Waters covers every aspect of commercial aviation and brings the reader to the conclusion that it is a much more perilous means of transportation than generally suspected Most of the material in this book has never been touched upon in any previous book on air safety The following are a few of the subjects that are documented in this book There are no U S airports that have adequate firefighting procedures Mechanically impaired airliners are allowed to fly when in reality they should be grounded

The flushing of an airline toilet has imperiled the lives of passengers aboard the plane and people on the ground The air traffic control system is near collapse caused by the bumbling FAA Airline pilots are not thoroughly trained to recover from all modes of flight The Boeing 737 is the most popular airliner ever built but it is potentially the most dangerous Captain Power Waters brings an understanding and appreciation of Air Traffic control from two perspectives as a pilot operating within the system and as someone who possesses a vast knowledge of the ATC s work William A Faville Jr National Air Traffic Controllers Association President MKC If you are interested in the training of an airline captain if you think your airline is safe or if you think the FAA is totally interested in your safety this is the book for you Carl T Butterworth Senior Captain American Airlines Ret Brig Gen ANG You obviously have done an extensive job researching this topic and more importantly it is clear you have lived the issues I congratulate you on your effort Robert Roach Jr General Vice President International Association of Machinists and Aerospace Workers **Federal Register** ,1998-06-15 **The British Review**
