### **Human Rights and Biomedicine**

George P. Smith II, 2021-08-04 The eight chapters within this volume are structured around an exploration of the fundamental issues in the field of biomedical human rights dignity and autonomy in not only procreative liberties but throughout the complete cycle of life and death the freedom of scientific inquiry into the new biotechnological methods of collaborative reproduction the right to genetic integrity at birth and throughout life and the equitable right to health or access to health care benefits during life and old age All these central issues are tested of necessity but utilitarian principles which in turn force the templates for decision making evaluate the gravity of harm deriving from a particular human right and its recognition and enforcement measured against the utility of the social economic or cultural good accruing from recognition of such a right in the first instance Ultimately cultural relativism will be seen more often than universality as the determinative point of balance This volume not only informs the ongoing debate on the role of human rights in biomedicine but will also provide enlightened responses to the troublesome issues presented in this new age of biotechnology
