The Biology Of Ageing

The Biology Of Ageing:

The Biology of Aging John A. Behnke, 2012-12-06 Egocentricity is characteristically human. It is natural for our prime interest to be ourselves and for one of our major concerns to be what affects us personally. Aging and death, universal and inevitable, have always been of compelling concern. Mystical explanations were invented when scientific answers were lacking, and gross physiologists. As scientific knowledge developed, anatomical processes were explained and the roles of the endocrine glands were revealed. Since the sex hormones obviously lose some of their potency with age, it was logical to assume that they played the major role in declining general well-being. The puzzle of aging would now be solved. The Ponce de Leon quest would soon be fulfilled. Pseudoscientists and quacks rushed in where most scientists feared to tread. By the time the glowing promises of perpetual youth through gland transplants and injections had proved illusory, serious study of the aging process had been set back for years. The field had lost respectability and most capable scientists shunned it. Those who did continue to seek answers to its tough questions deserve special recognition.

Although the topic is large and diverse, this practical and easy-to-read reference book contains vital information on the biology of ageing. It provides a concise understanding of the changes that occur and focuses on the clinical implications of ageing. MCQs are featured throughout for revision and examination practice. The Biology of Ageing provides the reader with a learning guide on the biology of ageing through an overview of the changes that occur at both cellular and system levels, knowledge of how biological changes of ageing impact on physiology and the clinical relevance in medical practice, a practical consideration of these changes in disease presentations and how these changes may impact on disease management. This full-colour guide featuring slides, MRIs, figures, and photographs is ideal for doctors training in geriatric medicine, practising geriatricians, and those with an interest in management of older people.
