The Biology Of Religion:

Biology, Religion, and Philosophy Michael Peterson, Dennis Venema, 2021-04-08 A comprehensive and accessible survey of the major issues at the biology religion interface *Religion & Biology* Ernest Ewart Unwin, 1922 This book is an attempt to outline the biological approach to the questions of religious thought from the Introduction **The Biology of Religious Behavior** Jay R. Feierman, 2009-06-08 Offers a fresh and detailed take on the evolution of religious behavior from a biobehavioral perspective promoting a new understanding that may help build bridges across the religious divide There has been much recent interest in the study of religion from the perspective of Darwinian evolution The Biology of Religious Behavior The Evolutionary Origins of Faith and Religion offers a broad overview of the topic written by internationally recognized experts In addition to its primary focus on religious behavior the book addresses other important aspects of religion such as values beliefs and emotions as they affect behavior The contributors approach the evolution of religion by examining the behavior of individuals in their everyday lives After describing various religious behaviors the contributors consider the behaviors with reference to their evolutionary history development during the lifetime of the individual proximate causes and adaptive value Happily this foray into understanding religion from a biobehavioral perspective demonstrates that at the biological and behavioral levels what unites the different religions of the world is far greater than what divides them **The Biology of God** Sir Alister Clavering Hardy, 1976 *The Biology of Religion* Vernon Reynolds, R. E. S. Tanner, 1983 *The Faith of Biology and the Biology of Faith* Robert E. Pollack, 2000-11-01 Are there parallels between the moment of insight in science and the emergence of the unknowable in religious faith Where does scientific insight come from Award winning biologist Robert Pollack argues that an alliance between religious faith and science is not necessarily an argument in favor of irrationality the two can inform each other's visions of the world Pollack begins by reflecting on the large questions of meaning and purpose and the difficulty of finding either in the orderly world described by the data of science He considers the obligation to find meaning and purpose despite natural selection's claim to be a complete explanation of our presence as a species a claim that calls upon neither natural intention nor design nor Designer Next the book focuses on matters of free will from the choice of a scientist to accept evidence to the choice of a religious person to accept a revelation to a patient's loss of free will in medical treatment Here Pollack addresses questions of ethics and offers a provocative comparison of two difficult texts whose contents remain incompletely understood the DNA text of the human genome and the Hebrew record of Jewish written and oral law In closing Pollack considers the promise of genetic medicine in enabling us to glimpse our own future and offers a reconsideration of the possible utility of the so called placebo effect in curing illness Whether refuting a DNA based biological model of Judaism or discussing the Darwinian concept of the species Pollack under the banner of free inquiry presents a genuine vital and well argued assay of the intersection of science and religion The Biology of God Sir Alister Clavering Hardy, 1975 A true biology encompassing the whole of life should not

ignore man's religious experience which when better understood may become as readily acknowledged in the biological system as human affectionate behaviour. Though a convinced Darwinian, Sir Alister Hardy stresses the urgency of appeasing the frustrated desires of our spiritually bereft civilization and is confident that a reconciliation of religion and the doctrine of natural selection can be effected. Beginning with evolutionary behaviour, he examines what Wallace, Polanyi, Waddington and Piaget have contributed to our knowledge of man's emergent mental life in the evolutionary continuum. He elucidates the theory confirmed by animal behaviour studies that biological similarities exist between man's attitude towards God and the association of dogs with man. If the idea of a biology of God is to be extended toward a more scientific natural theology, man's experience of what is divine or transcendental must be systematically studied. For this very purpose, Sir Alister Hardy has launched a research unit at Manchester College, Oxford. Into his powerful book, he has incorporated the developments of this unit's first burgeoning years, recording its growth into a pioneer field of biological and theological research. Publisher

The Biology of Religion Antonio T. De Nicolas, 1990-03-01 *The Biology of Religion* A. R. Shelandar, 1958 Why God Won't Go Away Andrew Newberg, M.D., Eugene G. D'Aquili, Vince Rause, 2002-03-26 Why have we humans always longed to connect with something larger than ourselves? Even today in our technologically advanced age, more than seventy percent of Americans claim to believe in God. Why in short won't God go away? In this groundbreaking new book, researchers Andrew Newberg and Eugene d'Aquili offer an explanation that is at once profoundly simple and scientifically precise. The religious impulse is rooted in the biology of the brain. In *Why God Won't Go Away*, Newberg and d'Aquili document their pioneering explorations in the field of neurotheology, an emerging discipline dedicated to understanding the complex relationship between spirituality and the brain. Blending cutting-edge science with illuminating insights into the nature of consciousness and spirituality, they bridge faith and reason, mysticism and empirical data. The neurological basis of how the brain identifies the real is nothing short of miraculous. This fascinating eye-opening book dares to explore both the miracle and the biology of our enduring relationship with God. *Religion, Disease, and Immunology* Thomas B. Ellis, 2022-06-02 This book argues that religion has emerged over evolutionary time as a strategy for managing the transmission, contraction, and eradication of infectious disease. From purity and pollution codes to blood sacrifices and irrational beliefs, the book shows how religion supports not only the physiological immune system but the behavioral and psychological immune systems as well. The book also addresses those moments when it appears that religion becomes maladaptive—that is, when religion causes autoimmune problems such as celibacy and anti-vaccination. Engaging material ranging from evolutionary and social psychology to human behavioral ecology, biological anthropology, Darwinian medicine, and religious studies, the book proposes that in order to understand the human animal's enduring fascination with religion, one must take into account the enduring need to manage infectious disease. **Creation of the Sacred** Walter Burkert, 1988-01-13 Sacrifice is essential to all religions. Could there be a natural, even biological, reason? Why are sacrifice and numerous other religious rituals and concepts shared by so many

different cultures In this extraordinary book one of the world's leading authorities on ancient religions explores the possibility of natural religion

Remarks on the Biology, Psychology and Politics of Religion Michael

Starks, 2019-09-08 In my view all behavior is an expression of our evolved psychology and so intimately connected to religion morals and ethics if one knows how to look at them Many will find it strange that I spend little time discussing the topics common to most discussions of religion but in my view it is essential to first understand the generalities of behavior and this necessitates a good understanding of biology and psychology which are mostly noticeable by their absence in works on religion politics history morals and ethics etc In my view most such efforts have no grasp at all of the operation of System 2 the slow cortical functions of the brain which can be equated to linguistic behavior or the mind and which I call the Descriptive Psychology of Higher Order Thought and which I regard as the province of philosophy in the narrow sense It is my contention that the table of intentionality rationality mind thought language personality etc that features prominently here describes more or less accurately or at least serves as an heuristic for how we think and behave and so it encompasses not merely philosophy and psychology but everything else religion history literature mathematics politics etc Note especially that intentionality and rationality as I along with Searle Wittgenstein and others view it includes both conscious deliberative System 2 and unconscious automated System 1 actions or reflexes This collection of articles was written over the last 10 years and revised to bring them up to date 2019 All the articles are about human behavior as are all articles by anyone about anything and so about the limitations of having a recent monkey ancestry 8 million years or much less depending on viewpoint and manifest words and deeds within the framework of our innate psychology as presented in the table of intentionality As famous evolutionist Richard Leakey says it is critical to keep in mind not that we evolved from apes but that in every important way we are apes If everyone was given a real understanding of this i.e. of human ecology and psychology to actually give them some control over themselves maybe civilization would have a chance As things are however the leaders of society have no more grasp of things than their constituents and so collapse into anarchy is inevitable in spite of the near universal views that religion politics or technology can save us See my Suicidal Utopian Delusions in the 21st Century 5th ed 2019 for a detailed exposition of this view It is critical to understand why we behave as we do and so I start with a brief review of the logical structure of rationality which provides some heuristics for the description of language mind rationality personality and gives some suggestions as to how this relates to the evolution of social behavior This centers around the two writers I have found the most important in this regard Ludwig Wittgenstein and John Searle whose ideas I combine and extend within the dual system two systems of thought framework that has proven so useful in recent thinking and reasoning research As I note there is in my view essentially complete overlap between philosophy in the strict sense of the enduring questions that concern the academic discipline and the descriptive psychology of higher order thought behavior Once one has grasped Wittgenstein's insight that there is only the issue of how the language game is to be played one

determines the Conditions of Satisfaction what makes a statement true or satisfied etc and that is the end of the discussion No neurophysiology no metaphysics no postmodernism no theology Along with many I see it as the basic religious or moral issue of our times that America and the world are in the process of collapse from excessive population growth most of it for the last century and now all of it due to 3rd world people **Scientific Christianity** Gerald Rowley Leighton,1916 A *New Biology of Religion* Michael Steinberg,2012-07-06 This study provides a fresh look at the debate between science and religion that documents how the experiences produced by spiritual practice are surprisingly consistent with the findings of modern biology despite the difficulty in reconciling scientific theories and religious dogma This book is unique in its focus on bodily experience as an independent source of knowledge and insight an important aspect of recent discoveries in neurology and psychology By rethinking what it is to be human and what role self consciousness plays it finds striking points of intersection between science and religion and challenges readers to rediscover their spiritual connections to the physical world Combining scientific rigor with the spiritual quest A New Biology of Religion Spiritual Practice and the Life of the Body reframes the science religion debate This profound work examines how all things are connected both scientifically and spiritually and shows how religious practices mirror the biological processes of life I and that Alex Comfort,1979

Religion and Biology Ernest E. Unwin,2016 **Something There** David Hay,2006 Despite the decline of institutional religion a remarkable new phenomenon is emerging Survey figures show that interest in spirituality often expressed as the awareness of something there is rising right across the developed world An astonishing upsurge of interest in spirituality is taking place across the Western world David Hay a zoologist who has directed much of the investigation on this subject in Britain explains the biological roots of spiritual awareness and the importance this has for the future of both religion and society in the West Research in the biological psychological and social sciences strongly suggests that spiritual awareness is a genuine and deep seated aspect of what it is to be human David Hay s interviews with hundreds of ordinary people who claim no formal religious affiliation backs up the view that spirituality is hard wired into our biological make up and evolves through natural selection because it has survival value It is what enables people to relate ethically to other human beings and to their environment By applying scientific method to religious enquiry David Hay offers a new account of the importance of spirituality for human well being **Genes, Genesis, and God** Holmes Rolston,1999-02-13 This book argues that the phenomena of religion can not be reduced to the phenomena of biology **Religious Speciation** Ina Wunn,Davina Grojnowski,2019-02-07 This book presents a consecutive story on the evolution of religions It starts with an analysis of evolution in biology and ends with a discussion of what a proper theory of religious evolution should look like It discusses such questions as whether it is humankind or religion that evolves how religions evolve and what adaptation of religions means Topics examined include inheritance and heredity religio speciation hybridization ontogenetics and epigenetics phylogenetics and systematics Calling attention to unsolved problems and relating the evolutionary subject matter to

appropriate material the book integrates and interprets existing data Based on the belief that an unequivocal stand is more likely to produce constructive criticism than evasion of an issue the book chooses that interpretation of a controversial matter which seems most consistent with the emerging picture of the evolutionary process Nothing in biology makes sense except in the light of evolution the evolutionary biologist and co founder of the so called New Synthesis in Evolutionary Biology Theodosius Dobzhansky 1900 1975 wrote in his famous essay of 1973 opposing creationism in American society Today Dobzhansky s statement is not only fully accepted in biology but has become the scientific paradigm in disciplines such as psychology archaeology and the study of religions Yet in spite of this growing interest in evolutionary processes in religion and culture the term evolution and the capability of an evolutionary account have to date still not been properly understood by scholars of the Humanities This book closes that gap
