Blue Eyes, Brown Eyes Stephen G. Bloom, 2021-10-05 The day after Martin Luther King Jr s assassination Jane Elliott a third grade schoolteacher in rural Iowa tried out a shocking experiment to show the scorching impact of racism on children Elliott separated her students according to the color of their Those with brown eyes would lord over those with blue eyes The brown eyed students were given permission to heckle and berate the blue eyed students even to start fights with them The Blue Eyed Brown Eyed Experiment would become world famous Elliott would go on to appear on Johnny Carson s *Tonight Show* followed by a stormy White House conference and tens of thousands of media events and diversity training sessions around the world Elliott taught Black Lives Matter fifty years before the phrase was ever uttered Yet the small town where Elliott began the incendiary experiment never forgot or forgave her She paid a price for her hard fought fame But was Elliott the benign and enlightened mother of diversity she claimed to be The damage she caused still reverberates An indelible confounding portrait of a woman driven to succeed set against the backdrop of a proud and upright farming community

Geological Survey Professional Papers ,1949 **U.S. Geological Survey Professional Paper** ,1974 The Subjectivity of Scientists and the Bayesian Approach S. James Press, Judith M. Tanur, 2012-01-20 Comparing and contrasting the reality of subjectivity in the work of history s great scientists and the modern Bayesian approach to statistical analysis Scientists and researchers are taught to analyze their data from an objective point of view allowing the data to speak for themselves rather than assigning them meaning based on expectations or opinions But scientists have never behaved fully objectively Throughout history some of our greatest scientific minds have relied on intuition hunches and personal beliefs to

make sense of empirical data and these subjective influences have often aided humanity's greatest scientific achievements. The authors argue that subjectivity has not only played a significant role in the advancement of science but that science will advance more rapidly if the modern methods of Bayesian statistical analysis replace some of the classical twentieth century methods that have traditionally been taught. To accomplish this goal the authors examine the lives and work of history's great scientists and show that even the most successful have sometimes misrepresented findings or been influenced by their own preconceived notions of religion, metaphysics and the occult or the personal beliefs of their mentors. Contrary to popular belief, our greatest scientific thinkers approached their data with a combination of subjectivity and empiricism and thus informally achieved what is more formally accomplished by the modern Bayesian approach to data analysis. Yet we are still taught that science is purely objective. This innovative book dispels that myth using historical accounts and biographical sketches of more than a dozen great scientists including Aristotle, Galileo Galilei, Johannes Kepler, William Harvey, Sir Isaac Newton, Antoine Lavoisier, Alexander von Humboldt, Michael Faraday, Charles Darwin, Louis Pasteur, Gregor Mendel, Sigmund Freud, Marie Curie, Robert Millikan, Albert Einstein, Sir Cyril Burt and Margaret Mead. Also included is a detailed treatment of the modern Bayesian approach to data analysis. Up to date references to the Bayesian theoretical and applied literature as well as reference lists of the primary sources of the principal works of all the scientists discussed round out this comprehensive treatment of the subject. Readers will benefit from this cogent and enlightening view of the history of subjectivity in science and the authors' alternative vision of how the Bayesian approach should be used to further the cause of science and learning well into the twenty first century.
