Lock, Judith Farquhar, 2007 A theoretically sophisticated and cross disciplinary reader in the anthropology of the body The Material Life of Human Beings Michael Brian Schiffer, 2002-01-22 In this ground breaking work the distinguished anthropological theorist Michael Brian Schiffer presents a profound challenge to the social sciences Through a broad range of examples he demonstrates how theories of behaviour and communication have too often ignored the fundamental importance of objects in human life In The Material Life of Human Beings the author builds upon the premise that the most important feature of human life is not language but the relationships which take place between people and objects The author shows that artifacts are involved in all modes of human communication be they visual auditory or tactile By creatively folding elements of postmodernist thought into a scientific framework he creates new concepts and models for understanding and analysing communication and behavior Challenging established theories within the social sciences Michael Brian Schiffer offers a reassessment of the centrality of materiality to everyday life **The Body** Tiffany Atkinson, 2005-09-11 What do we mean when we talk about the body This Reader challenges the assumption that it can be invoked as a neutral or indeed natural point of reference in critical discussion or cultural practice The essays collected here foreground the historical construction of the body throughout a range of discourses from the modern to the postmodern and seek to present it not as a biological given but as a contestable signifier in the articulation of identities **The Human Figure on Film** Seth Barry Watter, 2023-10-01 The Human Figure on Film asks what it is we look for when we look at human

beings projected on a screen People have appeared onscreen since film was invented Nothing could be more common and yet nothing confounds us more than a filmed human being Scholars and critics have attempted to reduce the mystery creating methodologies that make this figure legible Some of their efforts form the subject of this book Each chapter is devoted to a single central concept the natural the pictorial the institutional and the fictional that viewers have used to make sense of what they see Each concept in turn is tied to the work and methods of a particular kind of historical observer the natural historian Ray L Birdwhistell the aesthete or pictorialist Victor O Freeburg the anthropologist of institutions Hortense Powdermaker and the critic of fiction V F Perkins All of these researchers have their own interests and criteria of understanding ranging from a microscopic look at gestures to a broad view of characters Using a combination of critical history biography and formal analysis *The Human Figure on Film* offers a fresh approach to the problem of figuration in an age of digital cinema It is at once a cross section of the field of film studies a handbook of methods and an inquiry into the nature of inquiry itself

The Future of the Body Michael Murphy, 1993-04-21 In the oral and written histories of every culture there are countless records of men and women who have displayed extraordinary physical mental and spiritual capacities In modern times those records have been supplemented by scientific studies of exceptional functioning Are the limits of human growth fixed Are extraordinary abilities latent within everyone Is there evidence that humanity has unrealized capacities for self transcendence Are there specific practices through which ordinary people can develop these abilities Michael Murphy has studied these questions for over thirty years In *The Future of the Body* he presents evidence for metanormal perception cognition movement vitality and spiritual development from more than 3 000 sources Surveying ancient and modern records in medical science sports anthropology the arts psychical research comparative religious studies and dozens of other disciplines Murphy has created an encyclopedia of exceptional functioning of body mind and spirit He paints a broad and convincing picture of the possibilities of further evolutionary development of human attributes By studying metanormal abilities under a wide range of conditions Murphy suggests that we can identify those activities that typically evoke these capacities and assemble them into a coherent program of transformative practice A few of Murphy's central observations and proposals include The observation that cultural conditioning powerfully shapes or extinguishes metanormal capacities The proposition that we cannot comprehend our potentials for extraordinary life without an empirical approach that involves many fields of inquiry and different kinds of knowing The notion that a widespread realization of extraordinary capacities would constitute an evolutionary transcendence analogous to the rise of humankind from its primal ancestry The proposal that all or most instances of significant human development are produced by a limited number of identifiable activities such as disciplined self observation visualization of desired capacities and caring for others The idea that a balanced development of our various capacities is possible through integrated practices In *The Future Of The Body* Murphy states that such practices can carry forward Earth's evolutionary adventure and lead humanity to the next step in its

development *The Life We Are Given* George Leonard, 2005-10-20 The author of *The Future of the Body* and the author of *Mastery* team up to present a proven method for reaching the next stage of human development Can people with the time and energy consuming concerns of job and family find a way to transform their lives through a regular long term program of body mind spirit development Is it possible through conscious choice to participate in the next step of human evolution Two of the most distinguished theorists and teachers of human transformation believe the answer to these questions is yes In this inspiring and practical book George Leonard and Michael Murphy offer a comprehensive program of Integral Transformative Practice ITP based on a two year experimental class that grew out of their lifework Drawing upon some seventy years of combined experience in the study of human potential along with the significant findings of their recent experiment they present step by step instructions for joining body mind heart and soul in an evolutionary adventure that has powerful personal and social implications Their message will be especially refreshing to those who have become disillusioned by promises of immediate gratification instant learning and effortless enlightenment This book shows the way to profound and lasting transformation through long term practice It celebrates the day by day joys of the path while opening fresh vistas to human futures *The Social Organisation of Death* Lindsay Prior, 1989-05-15 A study of the way in which death is socially organized in the city of Belfast It analyzes the responses to 415 deaths registered here in 1981 tracing the social medical legal religious and political responses made to those deaths from the time death was pronounced to the time of disposal

How the Body Shapes the Mind Shaun Gallagher, 2006-10-12 *How the Body Shapes the Mind* is an interdisciplinary work that addresses philosophical questions by appealing to evidence found in experimental psychology neuroscience studies of pathologies and developmental psychology There is a growing consensus across these disciplines that the contribution of embodiment to cognition is inescapable Because this insight has been developed across a variety of disciplines however there is still a need to develop a common vocabulary that is capable of integrating discussions of brain mechanisms in neuroscience behavioural expressions in psychology design concerns in artificial intelligence and robotics and debates about embodied experience in the phenomenology and philosophy of mind Shaun Gallagher's book aims to contribute to the formulation of that common vocabulary and to develop a conceptual framework that will avoid both the overly reductionistic approaches that explain everything in terms of bottom up neuronal mechanisms and inflationistic approaches that explain everything in terms of Cartesian top down cognitive states Gallagher pursues two basic sets of questions The first set consists of questions about the phenomenal aspects of the structure of experience and specifically the relatively regular and constant features that we find in the content of our experience If throughout conscious experience there is a constant reference to one's own body even if this is a recessive or marginal awareness then that reference constitutes a structural feature of the phenomenal field of consciousness part of a framework that is likely to determine or influence all other aspects of experience The second set of questions concerns aspects of the structure of experience that are more hidden those that may be more difficult to get at

because they happen before we know it They do not normally enter into the content of experience in an explicit way and are often inaccessible to reflective consciousness To what extent and in what ways are consciousness and cognitive processes which include experiences related to perception memory imagination belief judgement and so forth shaped or structured by the fact that they are embodied in this way

Body Schema and Body Image Yochai Ataria, Shogo Tanaka, Shaun Gallagher, 2021-07-01 Body schema is a system of sensory motor capacities that function without awareness or the necessity of perceptual monitoring Body image consists of a system of perceptions attitudes and beliefs pertaining to one's own body In 2005 Shaun Gallagher published an influential book entitled *How the Body Shapes the Mind* OUP That book not only defined both body schema and body image but explored the complicated relationship between the two It also established the idea that there is a double dissociation whereby body schema and body image refer to two different but closely related systems Given that many kinds of pathological cases can be described in terms of body schema and body image phantom limbs asomatognosia apraxia schizophrenia anorexia depersonalization and body dysmorphic disorder among others we might expect to find a growing consensus about these concepts and the relevant neural activities connected to these systems Instead an examination of the scientific literature reveals continued ambiguity and disagreement This volume brings together leading experts from the fields of philosophy neuroscience psychology and psychiatry in a lively and productive dialogue It explores fundamental questions about the relationship between body schema and body image and addresses ongoing debates about the role of the brain and the role of social and cultural factors in our understanding of embodiment

Body Don Johnson, 1992 *Body Recovering Our Sensual Wisdom* outlines a plan for reclaiming unity among our body movements senses and thought processes It describes how we are pressured to mold ourselves to fit others' needs by attitudes fostered in religions schools the workplace and the military It gives special attention to how gender ideals shape us Interweaving personal experiences anatomical analyses and the stories of men and women from various walks of life the book explores how the mind/body split concretized in our social institutions coaxes us to distrust what our own senses tell us In marked contrast to the individualistic aura of books in a similar vein this book argues that individual awareness alone is not enough to correct the social scars left by mind/body dualisms Real change can only come about when we join together to alter the shapes of our social body schools churches political organizations businesses and health care practices Throughout the book there are practical yet sensitive exercises offered for bringing about a reunion of abstract ideas and flesh a recovery of our forgotten genius embedded in the cells of our bodies
