Suicide And Its Prevention The Role Of Attitude And Imitation:

Suicide and Its Prevention Rene F. W. Diekstra, Ronald Maris, Stephen Platt, Armin Schmidtke, Gernot Sonneck, 2023-10-20

In many countries of the world the number of persons that commit or attempt suicide has risen considerably over the past two decades. Particularly among young people, suicide rates have increased dramatically, suicide now ranking as the second or third cause of death among them. The causes of this development have been questioned by health care workers, scientists, and policy makers. Although much still remains unknown, it has become increasingly clear that one way in which a society affects the probability that an individual will die by his or her own hand is through the attitudes it adopts towards suicide. Modern society confronts people more and more often with attitudes and models such as in the mass media that express a permissive stance towards voluntary death in a variety of circumstances. Evidence suggests that imitation might indeed play a significant role in the frequency of suicide. A related aspect is the attitudes care givers entertain themselves towards suicide. This affects both the way in which they approach and treat individuals in suicidal crisis as well as the readiness of these individuals to look for professional help. The present volume presents an overview of important recent work on the influences of societal and care givers attitudes on suicide as well as provoking premature suicidal deaths. *Preventive Strategies on Suicide* Diekstra, Gulbinat, Kienhorst, Leo, 2023-07-31. Recent estimates by The World Health Organisation and The World Bank indicate that throughout the world each and every year more than 800 000 persons die as a consequence of suicide. This means that the death toll of suicide equals and in many countries even exceeds that of road traffic accidents. In addition to the number of suicidal deaths at least ten times as many persons make non fatal attempts to take their lives or harm themselves often seriously enough to require medical attention and not infrequently resulting in irreversible disability. But still these figures inadequately describe the magnitude of human loss and suffering caused by suicide. If one assumes that for every suicidal death there are at least five persons whose lives are profoundly and often for many years affected by the event emotionally, socially and economically by the event, then each year millions of survivor victims are added to the tens of millions already out there. Hence suicide is an ever recurring catastrophe of the first degree. It is not a phenomenon that first and foremost forms a dubious privilege of the so called highly developed countries. Suicide also occurs in the developing countries and there is more than suggestive evidence that in several of these countries the suicide rate equals or even surpasses the highest national rates shown by official statistics. It follows that suicide is an extremely important public health problem. It is however a problem that is painfully neglected. Throughout the world resources devoted to the prevention of suicide are only a tiny fraction of those devoted to the prevention of comparable problems such as road traffic accidents or to problems of lesser magnitude at least in the industrialized countries such as HIV infection and Aids. This volume produced under the supervision and auspices of the World Health Organization brings together for the first time information on epidemiological, clinical and preventive intervention aspects regarding suicide that have global significance and applicability.

After a detailed description of the epidemiology of suicide and suicidal behaviour on an international scale a large part of the book is devoted to the how to's of developing and organizing suicide prevention programs and services in different national and cultural settings both at clinical and community level. In addition a wealth of practical information for health care workers and volunteers is provided on how to evaluate and deal with acute suicide risk. Examples of successful preventive intervention programs and projects from the developed as well as the developing world are provided. Legal and ethical problems involved in suicide prevention are also discussed. Finally both cultural and biological aspects of suicidal behaviour as well as their clinical practice relevance are examined. *Suicide Prevention* D. de Leo, Armin Schmidtke, René F.W. Diekstra, 2007-05-08. *Suicide Prevention A Holistic Approach* contains the selected and edited papers that were presented during the congress Suicide Disease Disadvantage A Holistic Approach organized by the International Association for Suicide Prevention which was held in June 1995 in Venice. Suicide prevention is still sadly neglected by governments and public health authorities despite the fact that in several Western countries suicide has become the primary cause of death among younger age groups. The selected papers express the need for a holistic viewpoint in suicide management. The subjects range from parasuicide to the role of the media from the special type of psychotherapeutic approach required to the most recent guidelines in pharmacological treatment from a homage to the memory of Erwin Ringel to the presentation of specific national prevention schemes. The book will be of interest to public health workers, doctors, psychologists and social workers as well as voluntary staff and their organizations and to all those who make suicide prevention one of their primary interests.

The International Handbook of Suicide and Attempted Suicide Keith Hawton, Kees van Heeringen, 2000-11-21. Recent research in the area of suicidology has provided significant new insights in the epidemiological, psychopathological and biological characteristics of suicidal behaviour. The International Handbook of Suicide and Attempted Suicide is the first book to bring together this expertise and translate it into practical guidelines for those responsible for policy issues and for those involved in the treatment and prevention of suicidal behaviour. Leading international authorities provide a truly comprehensive and research based reference to understanding treating and preventing suicidal behaviour. They explore concepts and theories which best guide work within this field and detail key research which has supported conceptual developments, preventive interventions and clinical treatment. No self-respecting worker in deliberate self-harm and suicide prevention either clinical or research can afford to be without access to this comprehensive handbook. Possession and regular use may well become a marker of serious involvement in the subject. This is the most comprehensive up to date informative and well written source of information on suicide and suicidal behaviour, an invaluable work of reference which will be essential for clinicians and researchers for many years to come. Andrew Sims, Emeritus Professor of Psychiatry, St James's University Hospital, Leeds, UK. *British Journal of Psychiatry*. *Handbook of Cultural Health Psychology* Shahe S. Kazarian, David R. Evans, 2001-08-24. The Handbook of Cultural Health Psychology discusses the influence of cultural beliefs

norms and values on illness health and health care The major health problems that are confronting the global village are discussed from a cultural perspective These include heart disease cancer HIV AIDS pain and suicide The cultural beliefs and practices of several cultural groups and the unique health issues confronting them are also presented The cultural groups discussed include Latinos Aboriginal peoples people of African heritage and South Asians The handbook contributes to increased personal awareness of the role of culture in health and illness behavior and to the delivery of culturally relevant health care services Many societies are culturally diverse or becoming so the cultural approach is a unique and necessary addition to the health psychology area Satisfies the ever increasing appetite of health psychologists for cultural issues in health and women s health issues Major and global health concerns are covered including heart disease cancer HIV AIDS pain suicide and health promotion The health beliefs and practices of Latinos people of African heritage Aboriginal peoples and South Asians are presented without stereotyping these cultural groups The handbook provides excellent information for health care researchers practitioners students and policy makers in culturally pluralistic communities References are thorough and completely up to date
