Suisun Marsh History Anthony Arnold,1996 *Remote Sensing Advances in Biodiversity and Ecosystem Functioning Research* Zhouyuan Li,Weiwei Sun,Yanjie Xu,Jixi Gao,Shijia Peng,2024-02-06 Different dimensions of biodiversity are increasingly appreciated as critical for maintaining the functions of ecosystems and their services to humans More recently with the emergence of functional biogeography functional diversity is of particular interest due to its strong links with ecosystem processes such as carbon water and energy exchange and climate mitigation The multi form diversity varies in space and time Understanding this variation across scales is important for tracking the resilience of Earth s ecosystem and the information on the ecosystem structural features provides necessary foundations for monitoring predicting the ecosystem functioning patterns and process of ecosystems from individual unit to its whole in a holistic manner In recent the high resolution high throughput non intrusive and large scale data on biodiversity monitoring and measurement are becoming a new trend toward enhancing the efficiency and coherency in ecological discovery Still the available multi scale data on multi dimensional diversity are incomplete and non representative taxonomically geographically and temporally Although the studies on functional traits and their relations with function continue to grow local observations on functional traits are limited Recently remote sensing has proved to be a critical technology for addressing this research gap Air and satellite borne spectrometers at different levels could develop novel diversity measurements and alternati **Suisun Marsh History** Anthony Arnold,1996-10 **California History** ,1997 **An Annotated Bibliography of Research in Economically Important Species of California Fish and Game** ,1964 **Supplement [to] Recreation and Access in the Suisun Marsh** San Francisco Bay Conservation and Development Commission,1976 **Suisun Marsh Habitat Management, Preservation, and Restoration Plan** ,2011 *A Guide to Waterfowl Habitat Management in Suisun Marsh* Glenn L. Rollins,1981 Suisun Marsh is located adjacent to Suisun and Grizzly bays in the Sacramento San Joaquin River Estuary near the cities of Fairfield Cordelia and Benicia California The most obvious wildlife resource of the marsh is waterfowl The Marsh represents approximately 12% of all remaining natural marshland in California It is a vital wintering area for ducks of the Pacific Flyway A single aerial survey conducted in October 1974 recorded 1 128 035 waterfowl in the Marsh or 28% of the waterfowl in the state at that time Approximately 150 duck clubs own and manage 43 610 acres of the 57 310 acres of land area the state and federal government own the remaining 13 700 acres In addition to waterfowl the Marsh supports well over 150 other species of wildlife including some that are rare or endangered Suisun Marsh in its present form as a brackish water marsh is also endangered Increasing upstream water diversions by state and federal water projects municipalities and irrigation districts are reducing the freshwater flows which impede the intrusion of sea water and mix with it to produce an estuarine environment It has been established that such diversions will increase the magnitude and duration of saltwater intrusion into Marsh bays and sloughs Ecological studies conducted in the Marsh by the California Department of Fish and

Game DFG and the U S D A Soil Conservation Service SCS have demonstrated that the application of highly saline water on the managed wetlands would result in vegetative changes that reduce the abundance of important waterfowl food plants and thus decrease the waterfowl holding capacity of the Marsh The preservation of the Suisun Marsh as a viable wildlife area capable of supporting its present wide variety of plants and animals particularly waterfowl is largely dependent upon three factors 1 water of adequate quality and quantity for marsh management purposes 2 the widespread use of efficient and effective marsh management practices and 3 the retention of tidal mudflats and marshes In 1977 the California Water Resources Control Board SWRCB adopted Decision 1485 which set stringent water quality standards for the estuary surrounding the Marsh These standards were recommended by local state and federal conservation agencies after nearly fifteen years of intensive research The SWRCB was aware at the time it adopted D 1485 that the water quality standards stipulated therein were adequate for marsh protection only if efficient marsh management practices were employed The SWRCB is responsible for ensuring the efficient and reasonable use of the State s limited water resources To that end the Board judged that the reasonable use of water in the Marsh required that local landowners employ efficient marsh management practices The purpose of this guide is to provide the basic information necessary for the landowners in the Marsh to practice productive marsh management This guide incorporates the results of research projects and the practical know how of experienced marsh managers The primary objective of the management practices described herein is to maximize waterfowl food production while maintaining a diverse marsh flora capable of supporting the present wide variety of animal life
