Sunlit Waters:

My "budie" and I Marcellus Eugene Thornton, 1899 Something Spectacular Howard A. Tanner, 2018-12-01 As the new chief of the Michigan Department of Conservation's Fish Division in 1964 Howard A Tanner was challenged to do something spectacular He met that challenge by leading the successful introduction of coho salmon into the Michigan waters of the Great Lakes This volume illustrates how Tanner was able to accomplish this feat from a detailed account of his personal and professional background that provided a foundation for success the historical and contemporary context in which the Fish Division undertook this bold step to reorient the state's fishery from commercial to sport the challenges such as resistance from existing government institutions and finding funding that he and his colleagues faced the risks they took by introducing a nonnative species the surprises they experienced in the first season's catch to finally the success they achieved in establishing a world renowned biologically and financially beneficial sport fishery in the Great Lakes Tanner provides an engaging history of successfully introducing Pacific salmon into the lakes from the perspective of an ultimate insider The Sea Floor Eugen Seibold, Wolfgang H. Berger, 2013-06-29 Man's understanding of how this planet is put together and how it evolved has changed radically during the last 30 years This great revolution in geology now usually subsumed under the concept of Plate Tectonics brought the realization that convection within the Earth is responsible for the origin of today's ocean basins and continents and that the grand features of the Earth's surface are the product of ongoing large scale horizontal motions Some of these notions were put forward earlier in this century by A Wegener in 1912 and by A Holmes in 1929 but most of the new ideas were an outgrowth of the study of the ocean floor after World War II In its impact on the earth sciences the plate tectonics revolution is comparable to the upheaval wrought by the ideas of Charles Darwin 1809-1882 which started the intense discussion on the evolution of the biosphere that has recently heated up again Darwin drew his inspiration from observations on island life made during the voyage of the Beagle 1831-1836 and his work gave strong impetus to the first global oceanographic expedition the voyage of HMS Challenger 1872-1876 Ever since oceanographic research has been intimately associated with fundamental advances in the knowledge of Earth This should come as no surprise After all our planet's surface is mostly ocean Dandelion Mary Evelyn Wood Lovejoy, 1899

Plankton Tom Jackson, Jennifer Parker, 2024-04-09 A richly illustrated guide to the marvelously diverse plankton of the world and their fundamental role in planetary food webs Plankton are the unsung heroes of planet Earth Passive drifters through the world's seas oceans and freshwater environments most are invisible or very small but some are longer than a whale They are the global ocean's foundation food supporting almost all oceanic life and they are also vitally important for land based plants animals and other organisms Plankton provides an incomparable look at these remarkable creatures opening a window on the elegance and grace of microscopic marine life This engaging book reveals the amazing diversity of plankton how they belong to a wide range of living groups and how their ecology lifestyles and adaptations have evolved to

suit an enormous range of conditions It looks at plankton life cycles the different ways plankton feed and grow and the vast range of strategies they use for reproduction It tracks where how and why plankton drift through the water shares perspectives on migrations and population explosions or blooms and why they happen and discusses the life sustaining role of plankton in numerous intertwined food webs throughout the world Beautifully illustrated Plankton sheds critical light on how global warming pollution diminishing resources and overexploitation will adversely impact planktonic life and how these effects will reverberate to every corner of our planet

Rocks Jan Zalasiewicz, 2016-12-01 Rocks more than anything else underpin our lives They make up the solid structure of the Earth and of other rocky planets and are present at the cores of gas giant planets We live on the rocky surface of the planet grow our food on weathered debris derived from rocks and we obtain nearly all of the raw materials with which we found our civilization from rocks From the Earth's crust to building bricks rocks contain our sense of planetary history and are a guide to our future In this Very Short Introduction Jan Zalasiewicz looks at the nature and variety of rocks and the processes by which they are formed Starting from the origin of rocks and their key role in the formation of the Earth he considers what we know about the deep rocks of the mantle and core and what rocks can tell us about the evolution of the Earth and looks at those found in outer space and on other planets
