The Architecture Of Cognition:

The Architecture of Cognition John Robert Anderson, 1996 First Published in 1995 Routledge is an imprint of Taylor Francis an informa company

The Architecture of Cognition John R. Anderson, 1983 Now available in paper The Architecture of Cognition is a classic work that remains relevant to theory and research in cognitive science The new version of Anderson s theory of cognitive architecture Adaptive Control of Thought ACT is a theory of the basic principles of operation built into the cognitive system and is the main focus of the book

The Architecture of Cognition Paco Calvo, John Symons, 2014-04-18 Philosophers and cognitive scientists reassess systematicity in the post connectionist era offering perspectives from ecological psychology embodied and distributed cognition enactivism and other methodologies In 1988 Jerry Fodor and Zenon Pylyshyn challenged connectionist theorists to explain the systematicity of cognition In a highly influential critical analysis of connectionism they argued that connectionist explanations at best can only inform us about details of the neural substrate explanations at the cognitive level must be classical insofar as adult human cognition is essentially systematic More than twenty five years later however conflicting explanations of cognition do not divide along classicist connectionist lines but oppose cognitivism both classicist and connectionist with a range of other methodologies including distributed and embodied cognition ecological psychology enactivism adaptive behavior and biologically based neural network theory This volume reassesses Fodor and Pylyshyn s systematicity challenge for a post connectionist era The contributors consider such questions as how post connectionist approaches meet Fodor and Pylyshyn s conceptual challenges whether there is empirical evidence for or against the systematicity of thought and how the systematicity of human thought relates to behavior The chapters offer a representative sample and an overview of the most important recent developments in the systematicity debate Contributors Ken Aizawa William Bechtel Gideon Borensztajn Paco Calvo Anthony Chemero Jonathan D Cohen Alicia Coram Jeffrey L Elman Stefan L Frank Antoni Gomila Seth A Herd Trent Kriete Christian J Lebiere Lorena Lobo Edouard Machery Gary Marcus Emma Mart n Fernando Mart nez Manrique Brian P McLaughlin Randall C O Reilly Alex A Petrov Steven Phillips William Ramsey Michael Silberstein John Symons David Travieso William H Wilson Willem Zuidema

Verbal Minds Toni Gomila, 2011-12-05 Ten years ago the hegemonic idea was that language was a kind of independent module within the mind a sort of print out of whatever cognitive activity was taking place but without any influence whatsoever in that activity While this view is still held evidence amassed in the last 10 years suggests another view of their inter relationships even though exactly which one is not clear yet in part because of the lack of a unified view and in part because of the inertia of the previous position in part because all this evidence must be considered together An increasing number of researchers are paying attention to the issues involved as the human language specificity may provide a clue to understand what makes humans smart to account for the singularities of human cognition This book provides a comprehensive review of the multiple developments that have taken place in the last 10 years on the question of the

relationships between language and thought and integrates them into a coherent framework It will be relevant for anyone working in the sciences of languages Synthesizes recent research Provides an integrated view of cognitive architecture Explains the relationships between language and thought

Verbal Minds Antoni Gomila, 2011-12-05 Language has most consistently been chosen as the key to understanding the human mind and to providing the building blocks necessary for achieving other specificities in human cognition abstract propositional thought recursivity decoupling of current situation creativity and conscious control It is not so clear how language influences human cognition This book discusses research regarding verbal ability and cognition

The Architecture of the Mind Peter Carruthers, 2006-09-28 This book is a comprehensive development and defense of one of the guiding assumptions of evolutionary psychology that the human mind is composed of a large number of semi independent modules The Architecture of the Mind has three main goals One is to argue for massive mental modularity Another is to answer a How possibly challenge to any such approach The first part of the book lays out the positive case supporting massive modularity It also outlines how the thesis should best be developed and articulates the notion of module that is in question Then the second part of the book takes up the challenge of explaining how the sorts of flexibility and creativity that are distinctive of the human mind could possibly be grounded in the operations of a massive number of modules Peter Carruthers s third aim is to show how the various components of the mind are likely to be linked and interact with one another indeed this is crucial to demonstrating how the human mind together with its familiar capacities can be underpinned by a massively modular set of mechanisms He outlines and defends the basic framework of a perception belief desire planning motor control architecture as well as detailing the likely components and their modes of connectivity Many specific claims about the place within this architecture of natural language of a mind reading system and others are explained and motivated A number of novel proposals are made in the course of these discussions one of which is that creative human thought depends upon a prior kind of creativity of action Written with unusual clarity and directness and surveying an extensive range of research in cognitive science this book will be essential reading for anyone with an interest in the nature and organization of the mind

Principles of Synthetic Intelligence PSI: An Architecture of Motivated Cognition Joscha Bach, 2009-04-06 This title features chapters on machines to explain the mind Damer s blueprint for a mind representation of and for mental processes language and future avenues from PSI to microPSI and much more

How to Build a Brain Chris Eliasmith, 2013-06-27 One goal of researchers in neuroscience psychology and artificial intelligence is to build theoretical models that are able to explain the flexibility and adaptiveness of biological systems How to build a brain provides a detailed guided exploration of a new cognitive architecture that takes biological detail seriously while addressing cognitive phenomena The Semantic Pointer Architecture SPA introduced in this book provides a set of tools for constructing a wide range of biologically constrained perceptual cognitive and motor models Examples of such models are provided and they are shown to explain a wide range of data including single cell recordings

neural population activity reaction times error rates choice behavior and fMRI signals Each of these models introduces a major feature of biological cognition addressed in the book including semantics syntax control learning and memory These models are not introduced as independent considerations of brain function but instead integrated to give rise to what is currently the world's largest functional brain model The last half of this book compares the Semantic Pointer Architecture with the current state of the art addressing issues of theory construction in the behavioral sciences semantic compositionality and scalability among other considerations The book concludes with a discussion of conceptual challenges raised by this architecture and identifies several outstanding challenges for this and other cognitive architectures Along the way the book considers neural coding concept representation neural dynamics working memory neuroanatomy reinforcement learning and spike timing dependent plasticity The book includes 8 detailed hands-on tutorials exploiting the free Nengo neural simulation environment providing practical experience with the concepts and models presented throughout

Soar: A Cognitive Architecture in Perspective J.A. Michon, Aladin Akyürek, 2013-03-12 Soar A Cognitive Architecture in Perspective represents a European perspective on Soar with the exception of the special contribution from Allen Newell arguing for Unified Theories of Cognition The various papers derive from the work of the Soar Research Group that has been active at the University of Groningen The Netherlands since 1987 The work reported here has been inspired in particular by two topics that precipitated the group's interest in Soar in the first place road user behavior and the temporal organization of behavior more specifically planning At the same time the various contributions go well beyond the simple use of Soar as a convenient medium for modeling human cognitive activity In every paper one or more fundamental issues are raised that touch upon the very nature and consistency of Soar as an intelligent architecture As a result the reader will learn about the operator implementation problem chunking multitasking the need to constrain the depth of the goal stack and induction etc Soar is still at a relatively early stage of development It does nevertheless constitute an important breakthrough in the area of computer architectures for general intelligence Soar shows one important direction that future efforts to build intelligent systems should take if they aim for a comprehensive and psychologically meaningful theory of cognition This is argued in a powerful way by Newell in his contribution to this volume For this reason the Soar system will probably play an important integrative role within cognitive science in bringing together important subdomains of psychology computer science linguistics and the neurosciences Although Soar is not the only architecture for intelligence it is one of the most advanced and theoretically best motivated architectures presently available Soar A Cognitive Architecture in Perspective is of special interest to researchers in the domains of cognitive science computer science and artificial intelligence cognitive psychology and the philosophy of mind

Anatomy of the Mind Ron Sun, 2016-04-20 This book aims to understand human cognition and psychology through a comprehensive computational theory of the human mind namely a computational cognitive architecture or more specifically the Clarion cognitive architecture The goal of this work is to develop a unified framework for

understanding the human mind and within the unified framework to develop process based mechanistic explanations of a large variety of psychological phenomena Specifically the book first describes the essential Clarion framework and its cognitive psychological justifications then its computational instantiations and finally its applications to capturing simulating and explaining various psychological phenomena and empirical data The book shows how the models and simulations shed light on psychological mechanisms and processes through the lens of a unified framework In fields ranging from cognitive science to psychology to artificial intelligence and even to philosophy researchers graduate and undergraduate students and practitioners of various kinds may have interest in topics covered by this book The book may also be suitable for seminars or courses at graduate or undergraduate levels on cognitive architectures or cognitive modeling i e computational psychology

The Logic of Architecture ,1998 , The Architecture of the Mind:Massive Modularity and the Flexibility of Thought Peter Carruthers,2006-09-28 This book is a comprehensive development and defense of one of the guiding assumptions of evolutionary psychology that the human mind is composed of a large number of semi independent modules The Architecture of the Mind has three main goals One is to argue for massive mental modularity Another is to answer a How possibly challenge to any such approach The first part of the book lays out the positive case supporting massive modularity It also outlines how the thesis should best be developed and articulates the notion of module that is in question Then the second part of the book takes up the challenge of explaining how the sorts of flexibility and creativity that are distinctive of the human mind could possibly be grounded in the operations of a massive number of modules Peter Carruthers s third aim is to show how the various components of the mind are likely to be linked and interact with one another indeed this is crucial to demonstrating how the human mind together with its familiar capacities can be underpinned by a massively modular set of mechanisms He outlines and defends the basic framework of a perception belief desire planning motor control architecture as well as detailing the likely components and their modes of connectivity Many specific claims about the place within this architecture of natural language of a mind reading system and others are explained and motivated A number of novel proposals are made in the course of these discussions one of which is that creative human thought depends upon a prior kind of creativity of action Written with unusual clarity and directness and surveying an extensive range of research in cognitive science this book will be essential reading for anyone with an interest in the nature and organization of the mind

Cognitive Architectures Maria Isabel Aldinhas Ferreira, João Silva Sequeira, Rodrigo Ventura, 2018-09-03 This book provides an integrated framework for natural and artificial cognition by highlighting the fundamental role played by the cognitive architecture in the dialectics with the surrounding environment and consequently in the definition of a particular meaningful world This book is also about embodied and non embodied artificial systems cognitive architectures that are human constructs meant to be able to populate the human world capable of identifying different life contexts and replicating human patterns of behavior capable of acting according to human values and conventions systems that perform tasks in a

human like way By identifying the essential phenomena at the core of all forms of cognition the book addresses the topic of design of artificial cognitive architectures in the domains of robotics and artificial life Moving from mere bio inspired design methodology it aims to open a pathway to semiotically determined design

Architectures for Intelligence Kurt VanLehn,1991 First Published in 1991 Routledge is an imprint of Taylor Francis an informa company

How Can the Human Mind Occur in the Physical Universe? John R. Anderson Richard King Mellon Professor of Psychology and Computer Science Carnegie Mellon University,2007-07-18 The question for me is how can the human mind occur in the physical universe We now know that the world is governed by physics We now understand the way biology nestles comfortably within that The issue is how will the mind do that as well Allen Newell December 4 1991 Carnegie Mellon University The argument John Anderson gives in this book was inspired by the passage above from the last lecture by one of the pioneers of cognitive science Newell describes what for him is the pivotal question of scientific inquiry and Anderson gives an answer that is emerging from the study of brain and behavior Humans share the same basic cognitive architecture with all primates but they have evolved abilities to exercise abstract control over cognition and process more complex relational patterns The human cognitive architecture consists of a set of largely independent modules associated with different brain regions In this book Anderson discusses in detail how these various modules can combine to produce behaviors as varied as driving a car and solving an algebraic equation but focuses principally on two of the modules the declarative and procedural The declarative module involves a memory system that moment by moment attempts to give each person the most appropriate possible window into his or her past The procedural module involves a central system that strives to develop a set of productions that will enable the most adaptive response from any state of the modules Newell argued that the answer to his question must take the form of a cognitive architecture and Anderson organizes his answer around the ACT R architecture but broadens it by bringing in research from all areas of cognitive science including how recent work in brain imaging maps onto the cognitive architecture

Unified Theories of Cognition Allen Newell,1994 Newell introduces Soar an architecture for general cognition A pioneer system in AI Soar is the first problem solver to create its own subgoals and learn continuously from its own experience Its ability to operate within the real time constraints of intelligent behavior illustrates important characteristics of human cognition

The Logic of Architecture William John Mitchell,1990 The Logic of Architecture is the first comprehensive systematic and modern treatment of the logical foundations of design thinking It provides a detailed discussion of languages of architectural form their specification by means of formal grammars their interpretation and their role in structuring design thinking Supplemented by more than 200 original illustrations The Logic of Architecture reexamines central issues of design theory in the light of recent advances in artificial intelligence cognitive science and the theory of computation The richness of this approach permits sympathetic and constructive analysis of positions developed by a wide range of theorists and philosophers from Socrates to the present

Mitchell first considers how buildings may be described in words and shows how such descriptions may be formalized by the notation of first order predicate calculus This leads to the idea of a critical language for speaking about the qualities of buildings Turning to the question of representation by drawings and scale models Mitchell then develops the notion of design worlds that provide graphic tokens which can be manipulated according to certain grammatical rules In particular he shows how domains of graphic compositions possible in a design world may be specified by formal shape grammars Design worlds and critical languages are connected by showing how such languages may be interpreted in design worlds Design processes are then viewed as computations in a design world with the objective of satisfying predicates of form and function stated in a critical language William J Mitchell is G Ware and Edythe M Travelstead Professor of Architecture at Harvard University and a founder of the Computer Aided Design Group in Los Angeles Among the books he has authored or coauthored are The Poetics of Gardens The Art of Computer Graphics Programming and Computer Aided Architectural Design

What Is Cognitive Psychology? Michael R. W. Dawson, 2022-08-08 What Is Cognitive Psychology identifies the theoretical foundations of cognitive psychology foundations which have received very little attention in modern textbooks Beginning with the basics of information processing Michael R W Dawson explores what experimental psychologists infer about these processes and considers what scientific explanations are required when we assume cognition is rule governed symbol manipulation From these foundations psychologists can identify the architecture of cognition and better understand its role in debates about its true nature This volume offers a deeper understanding of cognitive psychology and presents ideas for integrating traditional cognitive psychology with more modern fields like cognitive neuroscience
