Sulphur In Agroecosystems:

Sulphur in Agroecosystems E. Schnug, 2012-12-06 This is the second volume in the series Nutrients in Ecosystems Sulphur as an essential plant nutrient has received little attention This is explained by the facts that sulphur was obviously in sufficient supply from the atmosphere from soil and as a by product in mineral fertilizers Increases in the yield potential and thus in the nutrient requirement of modern crops however as well as remarkable changes in SO₂ emissions by private households power stations and industry associated with legislative measures to reduce air and water pollution have altered the situation to a large extent In particular the public concerns about forest decline and pollution induced climatic changes have initiated extensive research programs on the physiological functions of sulphur in plants on the occurrence and plant availability of sulphur in agricultural and forest soils and on the chemistry of sulphur compounds in the tropo and stratosphere This book cannot be an encyclopedia of sulphur in all the media mentioned nor in all ecozones of the globe However it aims to give an overview of our present knowledge with a special focus on the sulphur situation in agrosystems of industrialised Western Europe The ecological trends for sulphur observed in this region during recent decades are likely to be mirrored wherever industrialisation and urbanisation take place and where an increasing standard of living demands clean air good drinking water and nutritious food Agricultural production systems therefore require well founded information on the actual sulphur nutrition and potential sulphur fertilizer requirement of crops and soils respectively It is hoped that this book will provide this information and will encourage further research where open questions still exist **Sulphur in**

Plants Y.P. Abrol, A. Ahmad, 2013-06-29 Sulphur S plays a pivotal role in various plant growth and development processes being a constituent of sulphur containing amino acids cysteine and methionine and other metabolites viz glutathione and phytochelatins co factor of enzymes which contribute to stress repair and amelioration of heavy metal toxicity Besides a number of S containing components are biologically active and thus a source for use as medicinal value The basic global issue before the agricultural scientist and world community is to evolve cultivars and develop methodologies for efficient use of inputs to enhance agricultural productivity This is particularly true of the developing countries which are going to see maximum rise in population with changing food demands and declining availability of land Amongst the inputs nutrients play a crucial role The major requirement is for N P and K followed by several micro nutrients In this context reports of world wide S deficiency in the agricultural systems are relevant The reasons are many Broadly speaking reduction in S emission use of S free N P and K fertilizers and higher biomass production contributed the maximum Despite the need for sulphur as an essential plant nutrient and the substantial returns expected from its use very little attention has been given to fill the gap between supply and demand of S Sulfur Joseph Jez, American Society of Agronomy, 2008 Sulfur forms and cycling processes in soil and their relationship to sulfur fertility Jeff J Schoenau and Sukhdev S Malhi Sulfur nutrition of crops in the Indo Gangetic plains of South Asia M P S Khurana U S Sandana and Bijay Singh Soil sulfur cycling temperate agricultural
