The Laslc Textbook Of Lung Cancer Hc 2000:

Principles and Practice of Lung Cancer The Official Reference Text of the International Association for the Study of Lung Cancer (IASLC) ,2010 *Lung Cancer* Heine H. Hansen,2012-12-06 The Europe against Cancer programme has from its inception emphasised the key role which general practitioners must play in the actions necessary to achieve its aim of reducing the incidence and the mortality from cancer in the European Community General practitioners because of their day to day direct and continuing contact with patients play a role not only in primary prevention and education of patients but also in motivating their patients to accept secondary prevention and screening some of it carried out by general practitioners themselves These preventive activities are in addition to their traditional role in the care and management of patients with cancer at home and increasingly their role in active treatment In view of the importance of the general practitioner in the Europe against Cancer programme the European Commission with a view to providing general practitioners with up to date useful information has sponsored the production of this series of publications on organ based cancers especially written for general practitioners MICHEL RICHONNIER Coordinator of the Europe against Cancer programme Commission of the European Communities Brussels Preface To decrease the death rate of lung cancer is today one of the major challenges of medical doctors all over the world In Europe alone one person is dying of lung cancer every two minutes Accordingly most physicians will regularly in their career be confronted with a patient being either suspect of or having a lung cancer Lung Cancer: Basic and Clinical Aspects Heine H. Hansen,2012-12-06 Lung cancer is one of the biggest challenges in oncology today The challenge is due to the recognition of the possibility of prevention in at least 70-80 % of all the cases and the extreme difficulties encountered in the treatment of this neoplasm Despite the knowledge of prevention measures such as cessation of cigarette smoking the incidence continues to increase in many countries The increase is particularly notable in females in the westernized countries where the death rate in females in certain regions surpasses that of breast cancer Furthermore in many developing countries lung cancer is now being diagnosed with increasing frequency in both sexes and it is expected to be a major cause of death in those countries later in this century or the beginning of next century if the tobacco consumption will continue its rapid rise With respect to therapy the 1970s brought considerable progress in understanding of the clinical behaviour of lung cancer thereby establishing the importance of distinguishing between the major histologic types Therapeutic advancement was particularly experienced in small cell carcinoma with the introduction of combination chemotherapy after this special disease entity among lung cancers was recognized as being a disseminated disease in almost all cases at the time of diagnosis It was expected that the improvement in therapy would have continued in the early 1980s not only for small cell lung cancer but also for the other cell types
