Wiik, 2002 In the year 2000 the city of Bologna was the European Capital for Culture For this reason the University of Bologna and its Academy of Sciences following the Guglielmo Marconi Centenary and the Luigi Galvani Bicentenary Celebrations decided to call attention to the

major achievements of their most distinguished members in science and technology This invaluable volume presents a series of inventions and technological developments some thought of and directly implemented by Professor Antonino Zichichi others suggested and developed under his leadership all of them having contributed to the discovery of new particles and new phenomena in the field of subnuclear physics The book was conceived by an eminent scientist Professor Dr Björn H Wiik Director of Germany's most prestigious physics laboratory DESY Hamburg It would not be published were it not for Professor Dr Albrecht Wagner Chairman of the DESY Board of Directors and Dr Horst Wenninger from CERN Geneva the greatest European physics laboratory

How We Learn, how We Remember Leon N. Cooper, 1995 Leon Cooper's somewhat peripatetic career has resulted in work in quantum field theory superconductivity the quantum theory of measurement as well as the mechanisms that underly learning and memory He has written numerous essays on a variety of subjects as well as a highly regarded introduction to the ideas and methods of physics for non physicists Among the many accolades he has received some deserved one he likes specially is the comment of an anonymous reviewer who characterized him as a nonsense physicist This compilation of papers presents the evolution of his thinking on mechanisms of learning memory storage and higher brain function The first half proceeds from early models of memory and synaptic plasticity to a concrete theory that has been put into detailed correspondence with experiment and leads to the very current exploration of the molecular basis for learning and memory storage The second half outlines his efforts to investigate the properties of neural network systems and to explore to what extent they can be applied to real world problems In all this collection hopefully provides a coherent no nonsense account of a line of research that leads to present investigations into the biological basis for learning and memory storage and the information processing and classification properties of neural systems *Reflections on Experimental Science* Martin L. Perl, 1996 This is a collection of important lecture and original articles and commentaries by Martin Perl discoverer of the tau lepton and the third generation of elementary particles and this year's Nobel Prize winner This book contains a fascinating and realistic picture of experimental science based on the high energy physics research work carried out by him Using reprints of his articles with his commentaries the author presents the various aspects of experimental research in science the pleasures and risks of experimental work the pain and frustration with experiments that are useless or fail the dreaming about experiments that were not carried out the constant search for innovation and creativity in the work and the special joy of discovery The articles and commentaries range from the early days of bubble chambers and spark chambers in the 1950's to the author's present research experiments at an electron positron collider and a search for free quarks The book is for the general reader as well as the scientist **Selected Papers of J. Robert Schrieffer** John Robert Schrieffer, N. E. Bonesteel, Lev Petrovich Gor'kov, 2002 Presents papers by theoretical physicist J Robert Schrieffer on topics in superconductivity and condensed matter physics
