Gupta,2009-09-29 This book has been written to assist not only postgraduate students but also interested dermatologists general practitioners and surgeons During the last two decades various surgical therapies have been used in the treatment of stable refractory vitiligo but none of them became very popular because of their intrinsic drawbacks and thus could not be adopted as a standard procedure There has always been a need for a technique that gives best results without complications The commonly used surgical procedures for the treatment of vitiligo have been narrated in short and their characteristic drawbacks have been pointed out The cellular graft technique is costly requires a good laboratory and infrastructure and except for being able to cover a wider vitiliginous area the ultimate results are no better than tissue grafting technique I used the small skin particles prepared from ultra thin or thin split thickness skin graft the so called microskin graft in the treatment of vitiligo effectively with good expansion ratio i.e small donor skin to treat big vitiliginous area This procedure covers the benefit of cellular and tissue graft but without their inherent drawbacks The microskin graft technique has been illustrated with minimum necessary text to explain the steps This technique is very simple to learn and execute It is extremely cost effective and can treat very large area up to 1500 cm in an operative session

Lederer,2008-04-24 Organ transplantation is one of the most dramatic interventions in modern medicine Since the 1950s thousands of people have lived with new hearts kidneys lungs corneas and other organs and tissues transplanted into their bodies From the beginning though there was simply a problem surgeons often encountered shortages of people willing and able to give their organs and tissues To overcome this problem they often brokered financial arrangements Yet an ethic of gift exchange coexisted with the commodification of the body The same duality characterized the field of blood transfusion which was essential to the development of modern surgery This book will be the first to bring together the histories of blood transfusion and organ transplantation It will show how these two fields redrew the lines between self and non self the living and the dead and humans and animals Drawing on newspapers magazines legal cases films and the papers and

correspondence of physicians and surgeons Lederer will challenge the assumptions of some bioethicists and policymakers that popular fears about organ transplantation necessarily reflect timeless human concerns and preoccupations with the body She will show how notions of the body intact in parts living and dead are shaped by the particular culture in which they are embedded
