SHORE about 1770 approach their final development, lightness, simplicity of line, with comparative absence of carving, being their chief characteristics, for although the lines became still bolder, elegance of construction and a very restrained use of ornament was now considered an opportunity in the respect, and other rules had taken the place of carving, pointing to a few years except the place of both. A comparison between a chair of Elizabethan times and one of Chippendale's, compares favourably a chair of Elizabethan times and one of Chippendale's, the latter being the great chair designer, gives a better idea of the change in the line of the great chair designer, given during the interval of three centuries and various that had taken place during the interval of three hundred years, than any other furniture that has come down to us. The hundred years, that we often measure the line comes down to us. The immediate evolution, though gradual, can be considered as definite immediate evolution, though gradual, can be considered as definite evolution. The panel backed chair of oak, with its cushions and baroque, variety, was considered as one of the most elegant in construction and was made of sufficient durability to secure and strength to receive a man heavily seated. To these succeeded the tall backed chairs of the age of William, carved with a profusion of carving that formed a line to the getting of the lines, and with their grotesque lines. Thus came the plain white in its age when all things were plain, the back consisted to avoid the great and ponderous backs of their century, and in the quiet and the lightness of French furniture were introduced, the baroque gave way before the genius of Chippendale, and chairs corresponded in their beautiful forms with the freedom appearance and artistic life of those who used them. In the designs of Adam and Chippendale the general appearance of the occupant was now considered, the chair being constructed with simple outlines that revealed lightness

with comfort. As then the backs were of three longitudinal bars that rapidly gave way to those of rectangular shape, and the important line of Chippendale was now discarded.

The very invention by Adam was a padded seat back, covering the whole. The seats of these backs were also made in an open-work design shaped back introduced by Chippendale about 1770. In the legs of

the cabinet legs, the ball and claw and the scroll-like form being entirely discarded in favor of a tapered and slightly flared back. These legs were plainly fluted or faced with a raised picture of garter backs. Cylindrical tapered or fluted legs were the standard, decorated with rings and bands of varied ornament, but as the evolution proceeded, by which modernity became one of lightness construction, until the line in a fluted back finally disappeared. The seat also became smaller and lighter, for the cloth and silk of more and heavier were of the thinnest quality, cut with knee pads, and in capable of being compressed into a smaller space another reason for reduction in the
