Meisels, 2007-12-20 Distributed search by agents is an important topic of distributed AI and has not been treated thoroughly as such While the scope of work on multi agent systems has grown steadily over the last decade very little of it has spilled into distributed search In contrast the constraints processing community has produced a sizable body of work on distributed constrained search Paradoxically a community that concentrates on search algorithms and heuristics has created a distributed model for agents that cooperate on solving hard search problems Traditionally this field has been named Distributed Constraints Satisfaction and lately also distributed constraints optimization The present book attempts to prompt deeper response from the MAS community and hopefully to give rise to cooperative work on distributed search by agents In order to achieve this high goal the book presents the large body of work on distributed search by constrained agents The presentation emphasizes many aspects of distributed computation that connect naturally to multi agent systems especially measures of performance for distributed search algorithms and the impact of delays in communication Distributed Constraints
