Leslie Keedy, 2012-12-06 During a short visit to Bremen in December 1989 John Rosenberg had several discussions with me about computer architecture Although we had previously worked together for more than a decade in Australia we had not seen each other for over a year following my move to Bremen in 1988 Meanwhile John was spending a year on study leave at the University of St Andrews in Scotland with Professor Ron Morrison and his persistent programming research group From our conversations it was quite clear that John was having a most fruitful time in St Andrews and was gaining valuable new insights into the world of persistent programming He was very keen to explore the significance of these insights for the MONADS Project which we had been jointly directing since the early 1980s MONADS was not about persistent programming In fact it had quite different origins in the areas of software engineering and information protection In an earlier stage of the project our ideas on these themes had led us into the world of computer architecture and even hardware design in our attempts to provide an efficient base machine for our software ideas The most important practical result of this phase of the project had been the development of the MONADS PC a mini computer which would be better compared with say a V tv

Mobile Forensics - The File Format Handbook Christian Hummert, Dirk Pawlaszczyk, 2022-05-03 This open access book summarizes knowledge about several file systems and file formats commonly used in mobile devices In addition to the fundamental description of the formats there are hints about the forensic value of possible artefacts along with an outline of tools that can decode the relevant data The book is organized into two distinct parts Part I describes several different file systems that are commonly used in mobile devices APFS is the file system that is used in all modern Apple devices including iPhones iPads and even Apple Computers like the MacBook series Ext4 is very common in Android devices and is the

successor of the Ext2 and Ext3 file systems that were commonly used on Linux based computers The Flash Friendly File System F2FS is a Linux system designed explicitly for NAND Flash memory common in removable storage devices and mobile devices which Samsung Electronics developed in 2012 The QNX6 file system is present in Smartphones delivered by Blackberry e g devices that are using Blackberry 10 and modern vehicle infotainment systems that use QNX as their operating system Part II describes five different file formats that are commonly used on mobile devices SQLite is nearly omnipresent in mobile devices with an overwhelming majority of all mobile applications storing their data in such databases The second leading file format in the mobile world are Property Lists which are predominantly found on Apple devices Java Serialization is a popular technique for storing object states in the Java programming language Mobile application app developers very often resort to this technique to make their application state persistent The Realm database format has emerged over recent years as a possible successor to the now ageing SQLite format and has begun to appear as part of some modern applications on mobile devices Protocol Buffers provide a format for taking compiled data and serializing it by turning it into bytes represented in decimal values which is a technique commonly used in mobile devices The aim of this book is to act as a knowledge base and reference guide for digital forensic practitioners who need knowledge about a specific file system or file format It is also hoped to provide useful insight and knowledge for students or other aspiring professionals who want to work within the field of digital forensics The book is written with the assumption that the reader will have some existing knowledge and understanding about computers mobile devices file systems and file formats
