Solvent Gels For The Cleaning Of Works Of Art

Dusan Stulik

Solvent Gels For The Cleaning Of Works Of Art:

Solvent Gels for the Cleaning of Works of Art Dusan Stulik, 2004 The cleaning of a work of art often involves removing not only dirt and grime but also unwanted layers of varnish gilding and paint from the work's surface The challenge for conservators lies in finding a cleaning agent that will act on one layer without affecting the layer being preserved and without leaving any harmful residues on the cleaned work This book which examines gel cleaning in the treatment of paintings and painted works of art presents the methodologies data and results of a collaborative project of the Getty Conservation Institute and Winterthur Museum Among the issues covered are the theory and application of gel cleaning systems the detection of residues left on the surfaces of objects cleaned with these systems research into solvent gel and solvent residues stability of surfactants during natural and artificial aging and recommendations for formulating gels for specific cleaning tasks Solvent gels for the cleaning of works of art Dusan Stulik, 2004 **The Conservator's Cookbook**

Laura Chaillie, 2024-12-30 The Conservator's Cookbook is a collection of practical step by step guides outlining how to prepare various solutions adhesives gels and other mixtures used in heritage conservation While most conservators learn the chemical rationale of solution making during their training the actual process of preparing these compounds can be neglected or eventually forgotten This cookbook provides a non exhaustive and adaptable resource compiling practical recipes from across heritage conservation literature into a single volume Drawing from techniques used in furniture paper paintings textiles and other conservation specialisms each recipe in the Cookbook begins with a short summary of key chemical ideas before relating step by step instructions The solutions range from simple dissolutions adhesive resins to more complex cleaning systems utilising surfactants chelation agents and enzymes and gelled carriers Each recipe is followed with collections of technical data which help to bridge the gap between chemical understanding and practical application The Cookbook also provides important notes on health and safety and laboratory best practice addressing some common misunderstandings and encouraging more sustainable approaches Intended for the experienced professional and conservation student alike The Conservator's Cookbook is a crucial reference work that provides a starting point for practical experimentation and interaction between different conservation specialisms *Nanoscience for the Conservation of Works of Art* Piero Baglioni, David Chelazzi, 2015-11-09 Understanding the chemistry behind works of art and heritage materials presents an opportunity to apply scientific techniques to their conservation and restoration Manipulation of materials at the nanoscale affords greater accuracy and minimal disturbance to the original work while efficiently combating the affects of time and environment This book meets the growing demand for an all encompassing handbook to instruct on the use of today's science on mankind's cultural heritage The editors have pioneered modern techniques in art conservation over the last four decades and have brought together expertise from across the globe Each chapter presents the theoretical background to the topic in question followed by practical information on its application and relevant case studies Introductory chapters present

the science behind the physical composition of art materials Four chapters explore various cleaning techniques now followed by four chapters describing the application of inorganic nanomaterials Each chapter is fully referenced to the primary literature and offers suggestions for further reading Professional conservators and scientists alike will find this essential reading as will postgraduate students in the fields of materials and colloid science art restoration and nanoscience Stone Conservation Clifford A. Price, Eric Doehne, 2011-02-15 First published in 1996 this volume has been substantially updated to reflect new research in the conservation of stone monuments sculpture and archaeological sites *Plasma Technology in the Preservation and Cleaning of Cultural Heritage Objects* Radko Tiňo, Katarína Vizárová, František Krčma, Milena Reháková, Viera Jančovičová, Zdenka Kozáková, 2021-03-30 Scientists have long been looking for alternative methods for the cleaning of historical and cultural museum objects as conventional methods often fail to completely remove surface films leaving contamination and surface residues behind Low temperature plasmas have recently been found to provide a new efficient and durable approach that maintains the safety of both the materials and personnel This book is the first to introduce the emerging use of low temperature plasmas in the cleaning and decontamination of cultural heritage items It provides a comprehensive exploration of the new possibilities of cleaning objects with plasma before providing a practice guide to the individual cleaning methods and an overview of the technologies and conditions used in the different cleaning regimes It is an ideal reference for researchers in plasma physics in addition to professionals working in the field of historical and cultural conservation Features Provides a thorough overview of the cleaning potential of emerging plasma technologies in accessible language for professional restorers and conservators without a scientific background Includes the latest case studies from the field which have not been published elsewhere yet Authored by a team of experts in the field About the Authors Dr Radko Tiňo is an Associate Professor at the Slovak University of Technology in Bratislava Slovakia Dr Katarína Vizárová is an Associate Professor at the Slovak University of Technology in Bratislava Slovakia Dr František Krčma is an Associate Professor at Brno University of Technology Czech Republic Dr Milena Reháková is an Associate Professor at the Slovak University of Technology in Bratislava Slovakia Dr Viera Jančovičová is an Associate Professor at the Slovak University of Technology in Bratislava Slovakia Dr Zdenka Kozáková is an Associate Professor at Brno University of Technology Czech Republic Alkoxysilanes and the Consolidation of Stone George Wheeler, 2005 Stone is one of the oldest building materials and its conservation ranks as one of the most challenging in the field The use of alkoxysilanes in the conservation of stone can be traced as far back as 1861 when A W von Hoffman suggested their use for the deteriorating limestone on the Houses of Parliament in London Alkoxysilane based formulations have since become the material of choice for the consolidation of stone outdoors This volume the first to cover comprehensively alkoxysilanes in stone consolidation synthesizes the subject's vast and extensive literature which ranges from production of alkoxysilanes in the nineteenth century to the extensive contributions from sol gel science in the 1980s and 90s Included are a historical overview an annotated bibliography and

discussions of the following topics the chemistry and physics of alkoxysilanes and their gels the influence of stone type commercial and noncommercial formulations practice lab and field evaluation of service life and recent developments This book is designed for conservators scientists and preservation architects in the field of stone conservation and will also serve as an indispensable introduction to the subject for students of art conservation and historic preservation Comparative Examinations of Cleaned Paint Surfaces Paul-Bernhard Eipper, 2018-01-23 This volume explains four different methods for examining paint surfaces It adopts several examination tools to compare untreated and treated surfaces of oil and acrylic paints such as scanning electron microscopy SEM computer aided laser profilometry environmental scanning electron microscopy ESEM and 3D measurement technology Samples of historic oil paints contemporary oil paints and modern acrylic paints are examined within using subjective and objective measurements to reveal ideal surface cleaning systems and methods for painting surfaces The book presents tests of several surface active materials on oil paints and acrylic paint surfaces including latex sponges and demineralized water saliva cellulose ethers anionic and nonionic detergents and microporous sponges **Materials for Conservation** C V Horie, 2013-05-13 Materials in Conservation is the definitive introduction to the properties of materials used in conservation The continual struggle of conservators to ameliorate the deterioration of objects has led to increasing use of synthetic polymers These materials are part of the sophisticated technology that has been developed to augment and often replace traditional materials and methods Conservators therefore have a wider range of techniques available However they must be able to appreciate the potentials and pitfalls of any proposed technique The first section explains physical and chemical properties which are important in the conservation process i e application ageing reversal The topics covered include molecular weight glass transition temperature solubility and solvents polymerisation and degradation reactions The second section provides a detailed consideration of the individual materials current and obsolete used in conservation drawing out the factors relevant to their effects on objects The conservation uses of each material are summarised and referenced to allow further study In five appendices the properties of the polymers solvents and their interactions are tabulated with a list of suppliers and conversion table of physical units IUPAC and SI nomenclature is used throughout the book In this second edition this classic text is revised and updated to include modern materials such as cyclododecane and current ideas on adhesion consolidation and reversibility making Materials in Conservation the definitive source of vital information in the field This handy reference book should be on the bench of every conservator and available wherever objects from steam engines to dried plants are preserved
